---

# Executive Summary

## Problem

---

Federal archaeological collections are a significant and nonrenewable national cultural resource; however, curation of these materials has been largely substandard or ignored for over fifty years. The result has been a steady deterioration of these resources, which include many priceless objects of long-vanished cultures. Archaeological artifact and record collections often have been generated through the years with little thought as to how to maintain their integrity once they were removed from the ground. The improper care and subsequent deterioration of many of these collections not only violate the laws under which they were recovered but also prevent Native American educational and scientific use of most of these materials. Valuable portions of the North American legacy remain unanalyzed, and the information contained in these collections has not been synthesized into this continent's prehistorical and historical record.

## Background

---

The U.S. Army Corps of Engineers (USACE) is responsible for the management of thousands of cultural resources on Corps property and for the curation of millions of archaeological and historical resources removed from these lands. As mandated by federal regulation, agencies are required to ensure that all recovered archaeological materials and the associated records are adequately curated and are accessible for use by the Native Americans, public, and researchers. Unfortunately, funding shortfalls, lack of consistent national policy, and the magnitude of the problem have prevented compliance in many instances.

USACE collections are public property, the result of many years of archaeological research and the expenditure of millions of federal dollars. A federally sponsored mitigation program usually provides for the recovery of materials from archaeological sites, the analysis of recovered items, the publication and circulation of a final report, and, sometimes the placement of collections in storage facilities for preservation, display, or future study. In the past, federal agencies afforded little attention to the maintenance of collections once salvage programs were completed. Through the years most collections have been stored free of charge by universities and museums. Inadequate funding and failing facilities now seriously hinder these institutions' ability to adequately care for collections. The result has been a steady deterioration of both artifact and record collections to the point that the

research and education value of many of these collections has become severely reduced. Additionally, many of the associated records have become separated from the artifacts, and some of the collections have been misplaced due to the lack of managed care and inadequate storage facilities.

Recognizing the problem, the U.S. Army Corps of Engineers' Director of Civil Works (DCW), and the Assistant Secretary of the Army (Civil Works), in conjunction with the Deputy Under Secretary of Defense (Environmental Security), requested USACE's Mandatory Center of Expertise (MCX-CMAC), St. Louis District to undertake a curation options project, a nationwide study of institutions that might be interested in serving as long-term repositories for USACE and Department of Defense (DoD) archaeological collections. The critical subject areas used in the study provide a concise and pointed overview of an institution's ability to provide long-term curation services to USACE and DoD. Additionally, because of the inequity of baseline data that had been collected to date in Fiscal Year 1998, the DCW directed MCX-CMAC to expedite the gathering of baseline curation data in order to compile complimentary data to the curation options project. A scope of work for the USACE Archaeological Collections Condition Assessment Project was developed and distributed on 15 January 1998 by the DCW to all Districts. The project began in March 1998.

## **Findings**

---

At the conclusion of the assessments for the Archaeological Collections Condition Assessment Project, the St. Louis District contacted over eight hundred facilities to inquire about USACE archaeological artifact and record collections. In total, one hundred sixty-six (166) facilities currently hold USACE archaeological collections, and another 18 are believed to house small, unconfirmed USACE collections. In order to meet mission requirements to conduct fieldwork within one year, existing curation needs assessment already conducted by several districts were used to provide some assessment data. Site visits were made to collect data for all other facilities that housed over 10 cubic feet of material and mail surveys were sent to those holding less than 10 cubic feet. In all, 119 facilities in 38 states were visited by St. Louis District personnel, or its representatives, in Fiscal Year 1998 to obtain detailed information regarding archaeological collections size, content, and current condition. Data resulting from existing reports, surveys, and site visits indicate that there are 166 facilities in 44 states that hold an estimated 46,522 cubic feet of artifact collections and 3,511 linear feet of record collections that are believed to fall under the curatorial responsibility of USACE within the United States (See Table 1 for a Division/District summary).

**Table 1.**

## **Conclusions**

---

Several corrective actions need to be implemented for bringing USACE archaeological artifact and record collections into compliance with 36 CFR Part 79 and ER 1130-2-540. These involve collection rehabilitation, maintenance of collections, and improvement of facilities housing collections. Since many collections are rapidly deteriorating in their current storage environments, a long-term, consistent management plan for the proper curation of archaeological collections and associated records is necessary. These federal collections provide raw archaeological data, and if not properly cared for soon, many will lose their educational and research value. Any progress will ensure that these collections will be more adequately preserved than they are now and that they will be useful to future generations.

## Acknowledgments

---

The entire St. Louis District staff contributed in various ways to the completion of these assessments. Specifically, Lara Anderson, Jim Barnes, Natalie Drew, Jim Ferguson, Jennifer Kuhl, Rhonda Lueck, Lee Rains, and Chris Roberts assisted in organizing and compiling data, producing data tables, and writing and editing the assessment report. Additionally, we appreciate the efforts and assistance offered by USACE district cultural resource managers. Their institutional knowledge and history of USACE archaeological collections proved invaluable. Repositories and facilities housing USACE collections were gracious in allowing visits for assessments by our staff and contractors and freely shared information regarding the collections, without which the project could not have been completed. The following facilities that assisted our efforts by allowing site visits or completing mail surveys have our sincere gratitude.

# 1

## Introduction

USACE is responsible for archaeological artifact collections and accompanying documentation (hereafter referred to as archaeological collections) stored in 166 institutions in almost every state of the nation. This responsibility is mandated through numerous legislative enactments, including the Antiquities Act of 1906 (P.L. 59-209), the Historic Sites Act of 1935 (P.L. 74-292), the Reservoir Salvage Act of 1960 (P.L. 86-523), the National Historic Preservation Act of 1966 (P.L. 89-665), and the Archaeological Resources Protection Act of 1979 (P.L. 96-95). Executive Order 11539 (U.S. Code 1971) and amendments to the National Historic Preservation Act in 1980 provide additional protection for these resources. The implementing regulation for securing the preservation of archaeological collections is 36 CFR Part 79, Curation of Federally-Owned and Administered Archeological Collections. Additionally, USACE possesses strict standards for curation of archaeological materials. Engineering Regulation (ER) 1130-2-540 and its accompanying pamphlet, which superseded ER 1130-2-433 (30 April 1991), was implemented in November 1996 and serves as a standard for long-term archaeological curation.

The Native American Graves Protection and Repatriation Act (P.L. 101-601, NAGPRA) was enacted in 1990 to identify federal holdings of Native American human remains, funerary objects, sacred objects, and objects of cultural patrimony. In addition, NAGPRA mandates that federal agencies reach agreements with Native American Tribes, and Alaskan Native and Hawaiian groups, on the repatriation or disposition of these remains and objects.

As USACE recognized the need for compliance with NAGPRA and for long-term curation planning, questions regarding how best to use the limited resources available and how best to improve management of scattered collections became important. To this end, USACE, together with DoD, requested that the St. Louis District undertake a curation options project, a nationwide study of institutions be interested in serving as long-term repositories for USACE and DoD archaeological collections. After identifying museums or universities that may serve as potential curation partners with USACE and DoD, institutions are visited, evaluated, and ranked. The resulting information will provide USACE with data on which to develop a long-term archaeological collections management strategy. The curation options project has completed work in the western half of the United States, (and in Maryland and Virginia), and is currently working in the remaining states of the eastern United States.

As the curation options project progressed, it was determined that basic, curation data would be needed for USACE in order to utilize the project findings. As a result, funding was provided for a study to gather complementary baseline curation data on a national basis for USACE archaeological collections. In Fiscal Year 1998, the DCW directed MCX-CMAC to conduct a general inventory and assessment of all Corps civil works archaeological collections. The results of this assessment, when combined with the curation options results, will provide USACE with the necessary information needed to make informed decisions on the best strategy for meeting the Corps' curation responsibilities.

## 2

---

# Methods

USACE houses archaeological collections in a wide variety of facilities, including museums, universities, and contractor offices, usually, but not always, in their state of origin. Although some Corps districts have consolidated and upgraded their collections, most districts still have materials housed in various institutions and in need of extensive rehabilitation. As a result, the USACE condition assessment project was faced with not only locating collections at hundreds of facilities around the country but also evaluating the condition and size of the collections within a year's time frame.

In order for a collection and/or its associated records to be considered USACE responsibility for this project, the materials must have been generated from (1) a USACE fee-title property or (2) a USACE sponsored project (e.g., collections generated from surveys directed and sponsored by USACE for the anticipated inundation/construction of a reservoir). Fee-title properties were defined as those for which USACE has outright legal ownership. Collections resulting from any USACE-permit action alone, therefore, were not included in the assessment. Also, collections from any military property (e.g., Fort Stewart), although possibly contracted by or through the Corps, were not included.

Although these guidelines regarding which collections to include in the national survey were developed, collections exist that do not fall completely into one category or another. These include collections from which the original project was deauthorized, collections subsumed by the district from small projects on private lands (these may be permits), collections generated by USACE sponsored projects that, at the time, were collected on private land that eventually was purchased and inundated by the Corps, and those collections generated through the River Basin Surveys (RBS) Program, Work Projects Administration (WPA) projects, and other similar programs. The latter were generated not under Corps sponsorship but under other agencies, primarily the Department of Interior (acting under agreements with various entities), although USACE currently owns the lands. Collections generated under programs like the RBS rarely have written agreement that specify ownership of the collection, and, as such, various agencies and universities have made claims to collections, many for which they retain a personal interest. For this project, since no detailed real estate or record searches were undertaken, collections falling in these gray areas were assessed based on the current assumption of the districts or repository holding the collections. In situations where a district has assumed legal responsibility for a collection not derived from fee-title land, these materials were also assessed.

Human skeletal remains and other NAGPRA materials were included in the project. Although many of these items may be repatriated, some will be held by USACE for many years until competing claims are resolved and culturally unaffiliated remains are addressed. No doubt the repatriation of Native American human remains and items that fall under NAGPRA will alter the size of USACE collections in time. Since that time is still undetermined, this project included remains and items under NAGPRA in district summaries and costs for rehabilitation.

Standard MCX-CMAC methods for locating collections call for extensive background research at state historic preservation offices and repositories where site records, maps, and project reports are filed for information pertaining to collections size and content, contractor information, and

repository information. Using this method, it would take numerous years to conduct this research on the massive scale required by USACE. This, combined with the short time frame in which to conduct the fieldwork for the project, necessitated a modification to our usual methods.

### Compilation of Potential Repositories

A preliminary list of facilities that may house archaeological collections was made using a number of available resources. First, USACE districts were contacted and asked to provide a list of their known repositories and the scope of their collections. A list of museums obtained from *The Official Museum Directory* was added. Finally, records from St. Louis District projects were searched to locate names of contractors, universities, and individuals that were known to hold archaeological collections. Upon completion, the preliminary list totaled roughly eight hundred institutions.

### Initial Contact with Potential Repositories

Telephone calls were made to the institutions on the preliminary list and the information obtained from the calls was recorded on standardized forms. This information included whether they held USACE artifact or record collections, which districts the collections were from, how large were the collections, and whether or not the collections contained skeletal remains. Telephone calls began in February 1998 and continued into June 1998. Based on the results of the telephone calls, a priority list of facilities needing a site visit was made. All repositories holding less than ten cubic feet of artifacts or one linear foot of records were mailed a survey to complete in order to efficiently gather the necessary information. Additionally, USACE district offices were sent a survey to complete for any collections currently held at the district offices. Response to this request was variable, with 58% of the districts responding.

### Fieldwork

Once collections were identified, St. Louis District personnel, with assistance from its regional contractors, conducted site visits to the repositories. Because of the limited amount of time for fieldwork, a nonrandom sample of some voluminous collections was necessary. However, at all institutions, information regarding collection size and content, in addition to a general assessment of collection condition, was recorded on standardized forms following consistent guidelines. Additionally, several districts already had completed curation needs assessments or had detailed information regarding rehabilitation costs. In these instances, data were gleaned from existing assessment reports or by interviewing the districts and/or the facilities housing the collections. In all, approximately seventy-one percent of the data was generated directly from site visits by St. Louis District personnel or its representative contractors.

Material classes were ranked from most represented to least represented within a collection. Record formats (i.e., paper, electronic, photographic, audio/visual, and oversize materials) were measured for each format. Each material class and record format was rated using a rehabilitation level based on compliance with 36 CFR Part 79 and ER 1130-2-540 and its accompanying pamphlet. Rehabilitation level for artifacts was based on the completion of the following six basic tasks.

1. Cleaning of artifacts.
2. Sorting into material classes.
3. Directly labeling artifacts (when applicable).
4. Bagging of materials in appropriate archival container and labeling of each container.
5. Inserting acid-free labels in each secondary container.
6. Boxing and labeling the materials in archival primary containers.

Rehabilitation level for records was based on the completion of the following six basic tasks.

1. Physical arrangement of the materials in a logical order.
2. Packaging of materials in archival files.
3. Appropriate (i.e., consistent) labeling of all file folders.
4. Packaging of files in archival boxes or primary containers.
5. Creation of a finding aid for the collections.
6. Production of a duplicate, security copy of all records.

All rehabilitation levels were recorded to reflect the tasks that remained to be completed for each collection. Thus, the lower the level of rehabilitation, the better condition of the collection. Site numbers were also collected when available and when feasible. Costs for rehabilitation of the artifacts and records was estimated. Refer to Appendix 14 for further information. No information was collected regarding repository adequacy since this type of information is being collected as part of the curation options project.

USACE district cultural resource points of contacts were notified before site visits were conducted and were welcome to attend. Whenever possible, site visits were scheduled in conjunction with other St. Louis District project site visits in order to reduce costs and multiple repository visits. Most of the fieldwork was completed by September 1998.

## **Data Entry**

After all site visits to repositories housing USACE collections were completed, the information was standardized and entered into a database designed in Microsoft Access® software.

## **Data Compilation**

At the conclusion of the data entry, preliminary data on size and location of collections were compiled. These data were mailed electronically to each district cultural resource contact for review for inconsistencies between the project findings and district information. Additionally, project names were identified for collections for which the information was not readily available in the field. This was accomplished, for the most part, by using site numbers or collections names. However, several collections could not be identified to the project level. A list of these collections also was mailed electronically to the district cultural resource contact as a request for data. All collections for which there was no response from the district or that still could not be identified to a project are listed as “Not Determined.”

## **Chapter Synopsis**

Chapter 1 offers an introduction to the U.S. Army Corps of Engineers Archaeological Collections Condition Assessment report, and Chapter 2 outlines the methods followed. Chapter 3 provides a detailed overview of the project findings, including a summary of each District’s archaeological collection size and their rehabilitation status is given. This information is broken down by individual projects within each District. Division overviews are also provided. Chapters 4 and 5 provide a summary of the project findings and a glossary of terms. Copies of the standardized information data forms used throughout the project and a preliminary list of facilities that may house U.S. Army Corps of Engineers collections is presented in Appendixes 1 and 2. Appendixes 3-8 offer detailed data on artifact and record collections under the jurisdiction of the U.S. Army Corps of Engineers. A copy of the authority under which the project was conducted is provided in Appendix 9, and Appendix 10 includes copies of the mail survey forms used for facilities that were not visited. Appendixes 11 and 12 contain information on facilities responses to the mail surveys. Appendix 13

## **METHODS**

provides a list of facilities that were visited as part of this project, and Appendix 14 contains cost estimates for the rehabilitation of U.S. Army Corps of Engineers Civil Works archaeological artifact and record collections.

### 3

## Findings

At the conclusion of the assessments, St. Louis District personnel contacted over eight hundred facilities to inquire about USACE archaeological artifact and record collections. One hundred nineteen facilities in 38 states were visited in Fiscal Year 1998 to obtain detailed information regarding archaeological collections size, content, and current condition. Several facilities did not allow access for an assessment of materials we believed to potentially fall under USACE control, and thus, no assessments were made. These facilities include (1) Smithsonian Institution, (2) National Museum of the American Indian, (3) Phoebe Apperson Hearst Museum, University of California Berkeley, and (4) the New Jersey State Museum. Mail surveys, designed to gather collection information for those facilities that were believed to house a small amount of USACE collections, were sent to 77 institutions, including 33 USACE Districts. The resulting project data indicate that there are approximately 46,522 cubic feet of artifact collections and 3,511 linear feet of record collections that are believed to fall under the curatorial responsibility of USACE within the United States.

Following is a district-by-district summary of curation initiatives and collection information, including an estimate of size.

# Great Lakes and Ohio River Division (CELRD)

**Extent of Artifacts:** 2,096.71 ft<sup>3</sup>

**Extent of Associated Records:** 150.47 linear feet

**Number of Districts:** 7

**Number of Facilities Holding Collections:** 29

## Division Overview

CELRD is responsible for an estimated 2,096.71 ft<sup>3</sup> of artifact collections and 150.47 linear feet of record collections housed in 29 facilities in 11 states (Table 3). In general, small efforts to rehabilitate some of the artifact and record collections in the Great Lakes and Ohio River Division are underway. Most of the collections vary in condition. All cubic feet and linear feet measurements presented imply a level of accuracy that is not necessarily real. Collections, especially records, required measurement of less than a foot to ensure that small collections were not eliminated from the results. Although results are shown to the hundredth of a foot, all measurements are only estimates.

**Table 3.**  
**CELRD Summary**

District	Cubic Feet	Linear Feet	# of Repositories	# of States
Buffalo	6.70	0.44	2	1
Chicago	41.10	1.29	3	3
Detroit	10.90	4.34	4	3
Huntington	598.91	72.79	6	3
Louisville	790.15	39.48	8	3
Nashville	207.00	10.05	7	3
Pittsburgh	441.95	22.08	9	4

## Buffalo District (CELRB)

**Extent of Artifacts:** 6.70 ft<sup>3</sup>

**Extent of Associated Records:** 0.44 linear feet

**Number of Facilities Holding Collections:** 2

### District Curation Overview

No large-scale efforts to rehabilitate Buffalo District collections have been conducted or are underway.

### District Collections Summary

Buffalo District is responsible for 6.70 ft<sup>3</sup> of artifact collections and 0.44 linear feet of record collections currently stored at two facilities in New York (Table 4). See Tables 5 and 6 for project-by-project estimated collection size and average condition.

**Table 4.**  
**Current Location and Size of Buffalo District Collections**

Facility	State	Cubic Feet	Linear Feet
New York State Museum	NY	5.95	0.28
State University of New York at Binghamton, Public Archaeology Facility	NY	0.75	0.16
<b>TOTAL</b>		<b>6.70</b>	<b>0.44</b>

**Table 5.**  
**Average Rehabilitation Level of Artifacts by Project for Buffalo District**

Project	Cubic Feet	Average Rehabilitation Level
Batavia and Vicinity, Tonawanda Creek	0.75	2
St. Lawrence Seaway	5.95	3

**Table 6.**  
**Average Rehabilitation Level of Records by Project for Buffalo District**

Project	Linear Feet	Average Rehabilitation Level
Batavia and Vicinity, Tonawanda Creek	0.16	3
St. Lawrence Seaway	0.28	3

### Conclusions

Most of the artifact collections require three out of six tasks to be completed before they meet curation standards. The records also require three out of six tasks to be completed before they are in compliance.

## Chicago District (CELRC)

**Extent of Artifacts:** 41.10 ft<sup>3</sup>

**Extent of Associated Records:** 1.29 linear feet

**Number of Facilities Holding Collections:** 3

### District Curation Overview

The small amount of collections under the responsibility of the Chicago District has not been rehabilitated.

### District Collections Summary

Chicago District is responsible for 41.10 ft<sup>3</sup> of artifact collections and 1.29 linear feet of record collections currently stored at three facilities in Illinois, Wisconsin, and Indiana (Table 7). See Tables 8 and 9 for project-by-project estimated collection size and average condition.

**Table 7.**  
**Current Location and Size of Chicago District Collections**

Facility	State	Cubic Feet	Linear Feet
Great Lakes Archaeological Research Center	WI	1.1	0.49
Illinois State Museum	IL	39.0	0.30
Indiana University, Glenn Black Laboratory	IN	1.0	0.50
<b>TOTAL</b>		<b>41.10</b>	<b>1.29</b>

**Table 8.**  
**Average Rehabilitation Level of Artifacts by Project for Chicago District**

Project	Cubic Feet	Average Rehabilitation Level
Deep River Borrow Pit	1.0	2
Not Determined	39.0	2
Sturgeon Bay Ship Canal	1.1	2

**Table 9.**  
**Average Rehabilitation Level of Records by Project for Chicago District**

Project	Linear Feet	Average Rehabilitation Level
Deep River Borrow Pit	0.50	5
Not Determined	0.30	2
Sturgeon Bay Ship Canal	0.49	5

## Conclusions

On average, the artifact collections require two out of six tasks to be completed before they meet curation standards. The majority of the record collections will require five out of six tasks to be completed before they meet curation standards.

## Detroit District (CELRE)

**Extent of Artifacts:** 10.90 ft<sup>3</sup>

**Extent of Associated Records:** 4.34 linear feet

**Number of Facilities Holding Collections:** 4

### District Curation Overview

The Detroit District collections have been inventoried. However, no large-scale efforts to rehabilitate collections from the Detroit District have been conducted or are underway.

### District Collections Summary

Detroit District is responsible for 10.9 ft<sup>3</sup> of artifact collections and 4.34 linear feet of record collections currently stored at four facilities in Indiana, Wisconsin, and Michigan (Table 10). See Tables 11 and 12 for project-by-project estimated collection size and average condition.

**Table 10.**  
**Current Location and Size of Detroit District Collections**

Facility	State	Cubic Feet	Linear Feet
Commonwealth Cultural Resources	MI	2.3	1.12
Corps of Engineers, Detroit District Office	MI	1.0	0.00
Great Lakes Archaeological Research Center	WI	6.6	2.72
Indiana University, Glenn Black Laboratory	IN	1.0	0.50
<b>TOTAL</b>		<b>10.90</b>	<b>4.34</b>

**Table 11.**

Duluth-Superior Harbor	0.08	5
Fox River and Shiawassee Flats	1.12	5
Ft. Wayne Flood Control	0.50	5
Ottawa County Survey	0.57	5

## **Conclusions**

About half of the artifact collections require four out of six tasks to be completed before they meet curation standards. The records are in worse condition and require five out of six tasks to be completed before they are in compliance.

## Huntington District (CELRH)

**Extent of Artifacts:** 598.91 ft<sup>3</sup>

**Extent of Associated Records:** 72.79 linear feet

**Number of Facilities Holding Collections:** 6

### District Curation Overview

Collections from the Huntington District have been consolidated in West Virginia and inventoried. However, no large-scale efforts to rehabilitate collections have been conducted or are underway.

### District Collections Summary

Huntington District is responsible for 598.91 ft<sup>3</sup> of artifact collections and 72.79 linear feet of record collections currently stored at six facilities in Ohio, West Virginia, Kentucky, and Pennsylvania (Table 13). See Tables 14 and 15 for project-by-project estimated collection size and average condition.

Paintsville Lake	8.55	4
Winfield Lock and Dam	7.48	5
Yatesville Lake	0.76	3

## Conclusions

Most of the artifact collections require two-to-three out of six tasks completed before they meet curation standards. The records are in slightly worse condition and most require five out of six tasks to be completed before they are in compliance.

## Louisville District (CELRL)

**Extent of Artifacts:** 790.15 ft<sup>3</sup>

**Extent of Associated Records:** 39.48 linear feet

**Number of Facilities Holding Collections:** 8

### District Curation Overview

No large-scale efforts to rehabilitate collections from the Louisville District have been conducted or are underway.

### District Collections Summary

Louisville District is responsible for 790.15 ft<sup>3</sup> of artifact collections and 39.48 linear feet of record collections currently stored at eight facilities in Kentucky, Indiana, and Ohio (Table 16). Additionally, Wright State University in Dayton, Ohio, is believed to house about 2 ft<sup>3</sup> of artifacts and less than one linear foot of associated records from the Louisville District; however, these data could not be confirmed. See Tables 17 and 18 for project-by-project estimated collection size and average condition.

## Conclusions

Most of the artifact collections require three-to-four out of six tasks to be completed before they meet curation standards. The records are in worse condition and most require at least four out of six tasks to be completed before they are in compliance.

## Nashville District (CELRN)

**Extent of Artifacts:** 207.00 ft<sup>3</sup>

**Extent of Associated Records:** 10.05 linear feet

**Number of Facilities Holding Collections:** 7

### District Curation Overview

No large-scale efforts to rehabilitate Nashville District collections have been conducted or are underway.

### District Collections Summary

Nashville District is responsible for 207 ft<sup>3</sup> of artifact collections and 10.05 linear feet of record collections currently stored at seven facilities in Tennessee, Louisiana, and Kentucky (Table 19). See Tables 20 and 21 for project-by-project estimated collection size and average condition.

Upper Cumberland River	2.30	3
Williamsburg Flood Protection	0.08	6
Wolf Creek Dam/Lake Cumberland	0.33	6

## Conclusions

Most of the artifact collections require three out of six tasks completed before they meet curation standards. The records require three out of six tasks to be completed before they are in compliance.

## Pittsburgh District (CELRP)

**Extent of Artifacts:** 441.94 ft<sup>3</sup>

**Extent of Associated Records:** 22.08 linear feet

**Number of Facilities Holding Collections:** 9

### District Curation Overview

Collections were located by the Pittsburgh District while undergoing NAGPRA compliance activities. However, no large-scale efforts to rehabilitate collections have been conducted or are underway.

### District Collections Summary

Pittsburgh District is responsible for 441.94 ft<sup>3</sup> of artifact collections and 22.08 linear feet of record collections currently stored at nine facilities in Pennsylvania, Ohio, West Virginia, and New York (Table 22). Additionally, the following facilities are believed to house Pittsburgh District collections but these data could not be confirmed: American Archaeological Consultants, Fair Oaks, California (<1 ft<sup>3</sup>, unknown linear feet); KEMRON, Cincinnati, Ohio (4 ft<sup>3</sup>, unknown linear feet); University of Akron (0 ft<sup>3</sup>, <1 linear feet), Upper Miami Valley Archaeological Research Museum, Arcanum, Ohio (0 ft<sup>3</sup>, 1 linear feet); and Vendel, Etna, Pennsylvania (2 ft<sup>3</sup>, unknown linear feet). See Tables 23 and 24 for project-by-project estimated collection size and average condition.

**Table 22.**

## Conclusions

Most of the artifact collections require three out of six tasks to be completed before they meet curation standards. The records are in slightly better condition and most require only two out of six tasks to be completed before they are in compliance.

# Mississippi Valley Division (CEMVD)

**Extent of Artifacts:** 6,033.19 ft<sup>3</sup>

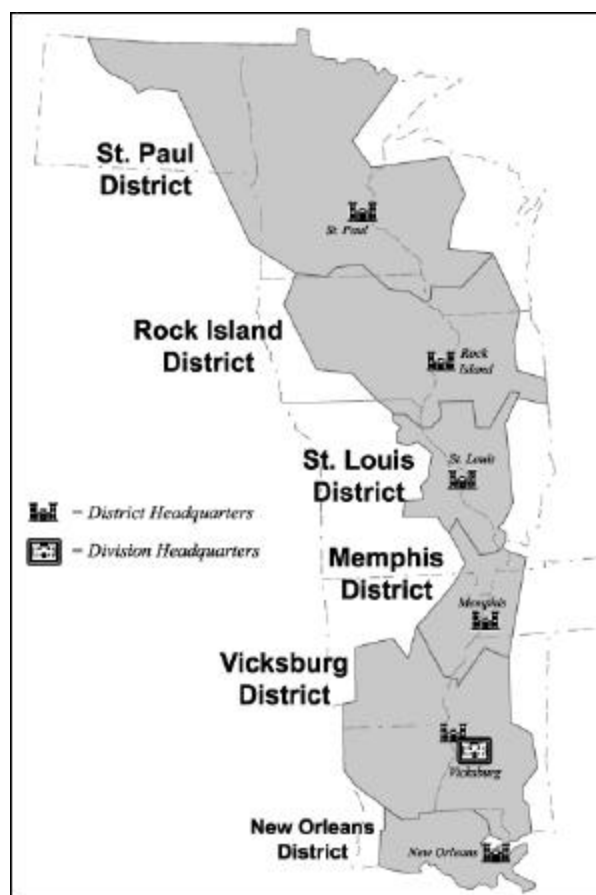

**Extent of Associated Records:** 366.32 linear feet

**Number of Districts:** 6

**Number of Facilities Holding Collections:** 47

## Division Overview

CEMVD is responsible for an estimated 6,033.18 ft<sup>3</sup> of artifact collections and 366.32 linear feet of record collections housed in 47 facilities in 16 states (Table 25). In general, many of the artifact and record collections in the Mississippi Valley Division have been rehabilitated or are undergoing rehabilitation. Artifact and record collections under the St. Louis District are almost completely rehabilitated. All cubic feet and linear feet measurements presented imply a level of accuracy that is not necessarily real. Collections, especially records, required measurement of less than a foot to ensure that small collections were not eliminated from the results. Although results are shown to the hundredth of a foot, all measurements are only estimates.

**Table 25.**  
**CEMVD Summary**

District	Cubic Feet	Linear Feet	# of Repositories	# of States
Memphis	568.48	18.30	11	7
New Orleans	736.48	32.64	9	2
Rock Island	929.01	133.07	6	4
St. Louis	2,219.66	102.38	3	2
St. Paul	139.09	16.21	10	4
Vicksburg	1,440.47	63.72	20	5

## Memphis District (CEMVM)

**Extent of Artifacts:** 568.48 ft<sup>3</sup>

**Extent of Associated Records:** 18.30 linear feet

**Number of Facilities Holding Collections:** 11

### District Curation Overview

Coalescing and rehabilitation of most of the collections still remain to be done, although efforts are underway to transfer some collections to a central location. A small amount of rehabilitation on some of the collections is taking place but no large-scale efforts have been made yet to upgrade the major portion of the District's collections.

### District Collections Summary

Memphis District is responsible for 568.48 ft<sup>3</sup> of artifact collections and 18.30 linear feet of record collections currently stored at 11 facilities in Arkansas, Michigan, Kentucky, Florida, Tennessee, New Orleans, and Missouri (Table 26). Additionally, Arkansas Archeological Survey–Russellville (<1 ft<sup>3</sup>, 0 linear feet) and Lee Decker and Associates, Fairfax Station, Virginia, (<1 ft<sup>3</sup>, 1 linear feet) are believed to house collections from Memphis District; however, these collections could not be confirmed. See Tables 27 and 28 for project-by-project estimated collection size and average condition.

## Conclusions

Although most of the collections are currently housed in three facilities, a number of small collections need to be coalesced with the rest. A little under half of the Memphis District artifact collections have undergone rehabilitation and only require two out of six tasks to be completed before they meet curation standards. Most of the remaining collections, however, need immediate attention. These require five out of six tasks to be completed before they are in compliance. The majority of the record collections also require five out of six tasks to be completed before they meet compliance regulations.

## New Orleans District (CEMVN)

**Extent of Artifacts:** 736.48 ft<sup>3</sup>

**Extent of Associated Records:** 32.64 linear feet

**Number of Repositories:** 9

### District Curation Overview

A curation needs assessment and a collections inventory have been undertaken by the District. Rehabilitation on some record and artifact collections has begun and continues.

### District Collections Summary

New Orleans District is responsible for 736.48 ft<sup>3</sup> of artifact collections and 32.64 linear feet of record collections currently stored at nine facilities in Louisiana and Texas (Table 29). See Tables 30 and 31 for project-by-project estimated collection size and average condition.

## Conclusions

Artifacts have anywhere from one-to-five tasks out of six that remain to be completed in order to fulfill the requirements for curation. Most of record collections have been rehabilitated and only have one out of six tasks that remain to be completed. Record collections that have not been rehabilitated still require an extensive effort (six out of six tasks) before they will meet the requirements for curation.

## Rock Island District (CEMVR)

**Extent of Artifacts:** 929.01 ft<sup>3</sup>

**Extent of Associated Records:** 133.07 linear feet

**Number of Facilities Holding Collections:** 6

### District Curation Overview

The Rock Island District has been coalescing collections to their state of origin. A curation needs assessment has been performed on the collections by the District and the collections were inventoried. Rehabilitation has begun on some portions of the Rock Island District collections. However, Most of the collections still require a moderate amount of rehabilitation to bring them into compliance with requirements.

### District Collections Summary

Rock Island District is responsible for 929.01 ft<sup>3</sup> of artifact collections and 133.07 linear feet of record collections currently stored at six facilities in Illinois, Missouri, Iowa, and Wisconsin (Table 32). Additionally, American Resources Group, Carbondale, Illinois, may have less than one cubic foot of artifacts and less than one linear foot of records from the Rock Island District; however, this information could not be confirmed. See Tables 33 and 34 for project-by-project estimated collection size and average condition.

**Table 32.**

## Conclusions

In general, artifact collections that have not undergone rehabilitation need four out of six tasks completed to bring them into full compliance. Record collections need three out of six tasks completed.

## St. Louis District (CEMVS)

**Extent of Artifacts:** 2,219.66 ft<sup>3</sup>

**Extent of Associated Records:** 102.38 linear feet

**Number of Facilities Holding Collections:** 3

### District Curation Overview

Collections have been coalesced for the St. Louis District. Rehabilitation on both record and artifact collections was begun several years ago and is almost complete.

### District Collections Summary

St. Louis District is responsible for 2,219.66 ft<sup>3</sup> of artifact collections and 102.38 linear feet of record collections currently stored at three facilities in Illinois and Missouri (Table 35). See Tables 36 and 37 for project-by-project estimated collection size and average condition.

## Conclusions

Rehabilitated collections do not require any more tasks to be completed in order to be in compliance.

## St. Paul District (CEMVP)

**Extent of Artifacts:** 139.09 ft<sup>3</sup>

**Extent of Associated Records:** 16.21 linear feet.

**Number of Facilities Holding Collections:** 10

### District Curation Overview

No large-scale efforts to rehabilitate collections from the St. Paul District have been conducted or are underway. Several curation agreements are in place.

### District Collections Summary

St. Paul District is responsible for 139.09 ft<sup>3</sup> of artifact collections and 16.21 linear feet of record collections currently stored at 10 facilities in Wisconsin, South Dakota, North Dakota, and Minnesota (Table 38). See Tables 39 and 40 for project-by-project estimated collection size and average condition.

## Conclusions

Some rehabilitation has taken place at one of the repositories. However, although collections have been inventoried by the district staff, they have not yet been coalesced into fewer repositories. In general, St. Paul District artifact collections will require two-to-four out of six tasks to be completed. Record collections will need five out of six tasks completed in order to reach compliance.

## Vicksburg District (CEMVK)

**Extent of Artifacts:** 1,440.46 ft<sup>3</sup>

**Extent of Associated Records:** 63.72 linear feet

**Number of Facilities Holding Collections:** 20

### District Curation Overview

No large-scale efforts to rehabilitate collections from the Vicksburg District have been conducted or are underway. However, some collections at the University of Mississippi are currently undergoing upgrading.

### District Collections Summary

Vicksburg District is responsible for approximately 1,440.46 ft<sup>3</sup> of artifact collections and 63.72 linear feet of record collections currently stored at 20 facilities in Louisiana, Mississippi, Texas, Tennessee, and Arkansas (Table 41). See Tables 42 and 43 for project-by-project estimated collection size and average condition.

## Conclusions

Rehabilitation on some record and artifact collections has begun and continues. The majority of the artifact collections require three out of six tasks that remain to be completed in order to fulfill the requirements for curation. Record collections will require four out of six tasks to be completed.

## North Atlantic Division (CENAD)

**Extent of Artifacts:** 1,132.98 ft<sup>3</sup>

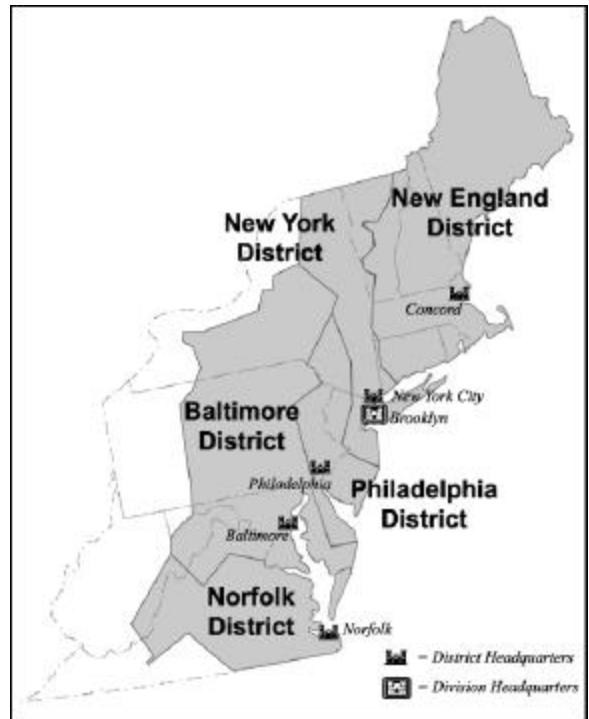

**Extent of Associated Records:** 68.96 linear feet

**Number of Districts:** 5

**Number of Facilities Holding Collections:** 16

### Division Overview

CENAD is responsible for an estimated 1,132.98 ft<sup>3</sup> of artifact collections and 68.96 linear feet of record collections housed in 16 facilities in 12 states. In general, the majority of the artifact and record collections in the North Atlantic Division have not been rehabilitated. However, two districts have upgraded a portion of their collections. All cubic feet and linear feet measurements presented imply a level of accuracy that is not necessarily real. Collections, especially records, required measurement of less than a foot to ensure that small collections were not eliminated from the results. Although results are shown to the hundredth of a foot, all measurements are only estimates.

**Table 44.**  
**CENAD Summary**

District	Cubic Feet	Linear Feet	# of Repositories	# of States
Baltimore	556.79	29.59	7	5
New England	33.01	9.89	4	4
Norfolk	381.95	18.92	2	1
New York	16.00	4.03	3	3
Philadelphia	145.23	6.53	3	3

## Baltimore District (CENAB)

**Extent of Artifacts:** 556.79 ft<sup>3</sup>

**Extent of Associated Records:** 29.59 linear feet

**Number of Facilities Holding Collections:** 7

### District Curation Overview

Curation costs have been included in mitigation efforts, resulting in the upgraded curation of a majority of the artifacts and documents. Only about five percent of the District's collections has not had rehabilitation work completed.

### District Collections Summary

Baltimore District is responsible for 556.79 ft<sup>3</sup> of artifact collections and 29.59 linear feet of record collections currently stored at seven facilities in Maryland, Pennsylvania, Delaware, New York, and West Virginia (Table 45). See Tables 46 and 47 for project-by-project estimated collection size and average condition.

Wyoming Valley Flood Control Project	0.10	3

## Conclusions

Most of the artifact collections require only one out of six tasks to be completed before they meet curation standards. Artifact collections not yet upgraded still require three out of six tasks to be completed. Most of the record collections have been upgraded and only require one out of six tasks to be completed in order to meet curation standards. The record collections that still need to be upgraded require four out six tasks completed before they are in compliance.

## New England District (CENAE)

**Extent of Artifacts:** 33.01 ft<sup>3</sup>

**Extent of Associated Records:** 9.89 linear feet

**Number of Facilities Holding Collections:** 4

### District Curation Overview

Efforts have been made to consolidate collections in their state of origin. A portion of the collections has been rehabilitated.

### District Collections Summary

New England District is responsible for 33.01 ft<sup>3</sup> of artifact collections and 9.89 linear feet of record collections currently stored at four facilities in Connecticut, Vermont, Rhode Island, and Maine (Table 48). Data from the assessment indicate that, in general, the collections vary in condition. See Tables 49 and 50 for project-by-project estimated collection size and average condition.

**Table 48.**

Otter Brook Lake	0.43	4
Townshend Lake	0.53	5
Tully Lake	0.28	4
Union Village Dam	0.53	5
West Thompson Lake	0.48	3

## Conclusions

Most of the artifact collections that still need rehabilitation require about four out of six tasks to be completed before they meet curation standards. Most of the records require four out of six tasks to be completed before they are in compliance.

# New York District (CENAN)

**Extent of Artifacts:** 16.00 ft<sup>3</sup>

**Extent of Associated Records:** 4.03 linear feet

**Number of Facilities Holding Collections:** 3

## District Curation Overview

Almost all of the collections from the New York District have been rehabilitated.

## District Collections Summary

New York District is responsible for 16 ft<sup>3</sup> of artifact collections and 4.03 linear feet of record collections currently stored at three facilities in New Jersey, Vermont, and New York (Table 51). See Tables 52 and 53 for project-by-project estimated collection size and average condition.

**Table 51.**  
**Current Location and Size of New York District Collections**

Facility	State	Cubic Feet	Linear Feet
Caven Point Marine Base	NJ	13.00	3.50
Panamerican Consultants	NY	2.00	0.00
University of Vermont, Consulting Archaeology Program	VT	1.00	0.53
<b>TOTAL</b>		<b>16.00</b>	<b>4.03</b>

**Table 52.**

**Table 53.**  
**Average Rehabilitation Level of Records by Project for New York District**

Project	Linear Feet	Average Rehabilitation Level
Missisquoi River	0.53	5
Passaic River Basin	3.50	0

## Conclusions

Most of the artifact collections have been completely rehabilitated and there are few, if any tasks that still remain to be completed to meet curation standards. Most of the records also do not require further upgrades.

## Norfolk District (CENAO)

**Extent of Artifacts:** 381.95 ft<sup>3</sup>

**Extent of Associated Records:** 18.92 linear feet

**Number of Facilities Holding Collections:** 2

### District Curation Overview

No large-scale efforts to rehabilitate collections from Norfolk District have been conducted or are underway.

### District Collections Summary

Norfolk District is responsible for 381.95 ft<sup>3</sup> of artifact collections and 18.92 linear feet of record collections currently stored at two facilities in Virginia (Table 54). See Tables 55 and 56 for project-by-project estimated collection size and average condition.

**Table 54.**  
**Current Location and Size of Norfolk District Collections**

Facility	State	Cubic Feet	Linear Feet
College of William and Mary Center for Archaeological Research	VA	0.00	2.30
James Madison University	VA	381.95	16.62

Fort Norfolk	0.30	2
Gathright Dam	16.62	4
Intercoastal Waterway Bridge	0.10	2
North River Navigation System	0.90	1

### Conclusions

Most of the artifact collections require five out of six tasks to be completed before they meet curation standards. Record collections require four out of six tasks to be completed before they are in compliance.

## Philadelphia District (CENAP)

**Extent of Artifacts:** 145.23 ft<sup>3</sup>

**Extent of Associated Records:** 6.53 linear feet

**Number of Facilities Holding Collections:** 3

### District Curation Overview

No large-scale efforts to rehabilitate Philadelphia District collections have been conducted or are underway.

### District Collections Summary

Philadelphia District is responsible for 145.23 ft<sup>3</sup> of artifact collections and 6.53 linear feet of record collections currently stored at three facilities in New York, Pennsylvania, and Delaware (Table 57). There are an additional 784 ft<sup>3</sup> of collections consisting of seven metal and wood gun carriages from Fort Delaware that have already been fully conserved. These were not included in the database as it would artificially inflate rehabilitation costs for the district. See Tables 58 and 59 for project-by-project estimated collection size and average condition.

**Table 57.**  
**Current Location and Size of Philadelphia District Collections**

Facility	State	Cubic Feet	Linear Feet
Delaware Department of Natural Resources and Environmental Control Curation Center/Grass Dale Center	DE	78.85	3.87

Blue Marsh Lake	1.78	2
Francis E. Walter Dam	0.63	3
Fort Delaware	3.87	4
Lehigh River Basin Hydro Project	0.25	3

## **Conclusions**

Most of the artifact collections require five out of six tasks to be completed before they meet curation standards. Although record collections are small, most of the records require four out of six tasks to be completed before they are in compliance.

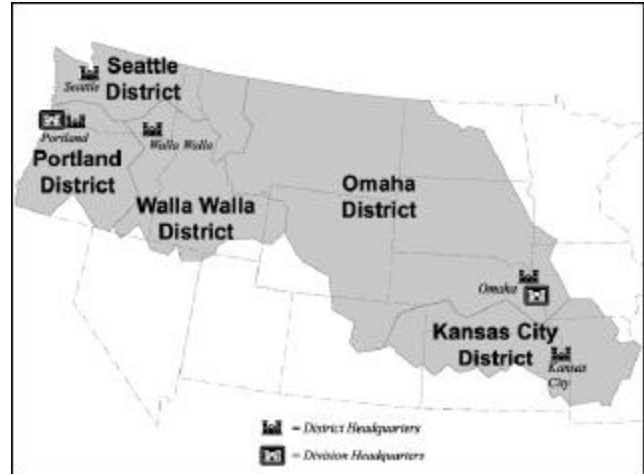

# Northwestern Division (CENWD)

**Extent of Artifacts:** 16,092.79 ft<sup>3</sup>

**Extent of Associated Records:** 903.56 linear feet

**Number of Districts:** 5

**Number of Facilities Holding Collections:** 30

## Division Overview

CENWD is responsible for an estimated 16,092.79 ft<sup>3</sup> of artifact collections and 903.56 linear feet of record collections housed in 30 facilities in 12 states. In general, many of the artifact collections in the Northwestern Division have been rehabilitated or are undergoing rehabilitation. However, collections in the Omaha District still need a fair amount of rehabilitation in order to comply with federal standards. Additionally, record collections on the whole need a fair to moderate amount of rehabilitation. All cubic feet and linear feet measurements presented imply a level of accuracy that is not necessarily real. Collections, especially records, required measurement of less than a foot to ensure that small collections were not eliminated from the results. Although results are shown to the hundredth of a foot, all measurements are only estimates.

**Table 60.**  
**CENWD Summary**

District	Cubic Feet	Linear Feet	# of Repositories	# of States
Kansas City	3,039.87	214.15	12	5
Omaha	4,569.71	183.04	14	7
Portland	3,447.98	130.05	6	2
Seattle	2,328.11	258.90	7	3
Walla Walla	2,707.12	117.42	5	3

## Kansas City District (CENWK)

**Extent of Artifacts:** 3,039.87 ft<sup>3</sup>

**Extent of Associated Records:** 214.15 linear feet

**Number of Facilities Holding Collections:** 12

### District Curation Overview

Collections held at the University of Missouri, Columbia are currently undergoing rehabilitation.

However, no large-scale efforts to rehabilitate the remaining collections from the Kansas City District have been conducted or are underway. A curation agreement has been made between the district and one of the repositories.

### District Collections Summary

Kansas City District is responsible for 3,039.87 ft<sup>3</sup> of artifact collections and 214.15 linear feet of record collections currently stored at 12 facilities in Missouri, Kansas, Iowa, Nebraska, South Dakota, and Illinois (Table 61). See Tables 62 and 63 for project-by-project estimated collection size and average condition.

Wilson Lake	2.15	5

## **Conclusions**

A large portion of the artifact and record collections is currently being rehabilitated. The unrehabilitated artifact collections require four out of six tasks that remain to be completed in order to fulfill requirements for compliance. Most of the record collections require at least three out of six tasks to be completed.

## Omaha District (CENWO)

**Extent of Artifacts:** 4,569.71ft<sup>3</sup>

**Extent of Associated Records:** 183.04 linear feet

**Number of Facilities Holding Collections:** 14

### District Curation Overview

No large-scale efforts to rehabilitate collections from the Omaha District have been conducted or are underway.

### District Collections Summary

Data from the assessment indicate that Omaha District is responsible for 4,569.71 ft<sup>3</sup> of artifact collections and 183.04 linear feet of record collections currently stored at 14 facilities in South Dakota, North Dakota, Nebraska, Kansas, Colorado, Iowa, and Minnesota (Table 64).

Additionally, the University of Montana, Missoula, is believed to house 1 ft<sup>3</sup> of artifacts and less than one linear foot of associated records from Omaha District; however, these collections could not be confirmed. See Tables 65 and 66 for project-by-project estimated collection size and average condition.

**Table 64.**

## Conclusions

Most of the collections require a fair to moderate amount of effort to bring them into full compliance with rehabilitation requirements. The large size of the district and the collections make curation a challenge. No large-scale efforts have yet been undertaken to rehabilitate artifacts or records. In general, Omaha District artifact collections will require four out of six tasks to be completed. Records also require a moderate amount of rehabilitation and will need four out of six tasks to be completed in order to reach compliance.

## Portland District (CENWP)

**Extent of Artifacts:** 3,447.98 ft<sup>3</sup>

**Extent of Associated Records:** 130.05 linear feet

**Number of Repositories:** 6

### District Curation Overview

No information available.

### District Collections Summary

Portland District is responsible for 3,447.98 ft<sup>3</sup> of artifact collections and 130.05 linear feet of record collections currently stored at six facilities in Washington and Oregon (Table 67). See Tables 68 and 69 for project-by-project estimated collection size and average condition.

**Table 67.**

**Table 69.**  
**Average Rehabilitation Level of Records by Project for Portland District**

<b>Project</b>	<b>Linear Feet</b>	<b>Average Rehabilitation Level</b>
Applegate Lake	12.25	5
Bonneville Dam	89.34	1
John Day Lock and Dam/Lake Umatilla	0.43	4
Lost Creek Lake	4.11	5
McNary Lock and Dam/Lake Wallula	2.94	6
Old Umatilla Townsite	20.98	6

## **Conclusions**

Although one-half of the collections needs only one out of six tasks to be completed for compliance, about one-half of the collections requires greater efforts to bring them into full compliance with rehabilitation requirements. This will require that up to five out of six tasks be completed for the artifacts. Most of records require only one task out of six to be completed to comply with standards.

## Seattle District (CENWS)

**Extent of Artifacts:** 2,328.11 ft<sup>3</sup>

**Extent of Associated Records:** 258.90 linear feet

**Number of Facilities Holding Collections:** 7

### District Curation Overview

The Seattle District has coalesced its archaeological collections and has been consistently rehabilitating the collections through its repositories. Several repositories are currently rehabilitating the collections and, thus, the collections are in variable condition.

### District Collections Summary

Seattle District is responsible for 2,328.11 ft<sup>3</sup> of artifact collections and 258.9 linear feet of record collections currently stored at seven facilities in Washington, Montana, and Idaho (Table 70). Additionally, Eastern Washington University is believed to house 12 ft<sup>3</sup> of artifacts and less than one linear foot of associated records from the Seattle District; however, these collections could not be confirmed. See Tables 102 and 103 for project-by-project estimated collection size and average condition.

**Table 70.**  
**Current Location and Size of Seattle District Collections**

Facility	State	Cubic Feet	Linear Feet

Chief Joseph Dam	172.47	3
Lake Washington Ship Canal	0.04	4
Libby Dam	72.91	1
River Mile 590	13.00	2

## **Conclusions**

Collections undergoing rehabilitation only require a slight amount of effort to bring them into full compliance with rehabilitation requirements. When assessed, many of the collections still needed three out of six tasks to be completed for the artifacts. The records also are being rehabilitated and varied from one to three tasks to be completed before they meet federal and Corps requirements.

## Walla Walla District (CENWW)

**Extent of Artifacts:** 2,707.12 ft<sup>3</sup>

**Extent of Associated Records:** 117.42 linear feet

**Number of Facilities Holding Collections:** 5

### District Curation Overview

Several contracts for curation services exist between the Walla Walla District and its repositories. Recently, collections have been coalesced into their state and region of origin. The district has upgraded some collections and has plans to continue rehabilitating.

### District Collections Summary

Walla Walla District is responsible for 2,707.12 ft<sup>3</sup> of artifact collections and 117.42 linear feet of record collections currently stored at five facilities in Washington, Idaho, and Oregon (Table 73). See Tables 74 and 75 for project-by-project estimated collection size and average condition.

**Table 73.**  
**Current Location and Size of Walla Walla District Collections**

Facility	State	Cubic Feet	Linear Feet
Idaho Archaeological Survey, Idaho State Historical Society	ID	106.75	4.03

Lucky Peak Project	4.10	5
McNary Lock and Dam/Lake Wallula	28.68	4
Miscellaneous	1.86	2
Not Determined	0.26	4

## **Conclusions**

Artifacts that have undergone rehabilitation are in full compliance. However, the remainder of the artifact collections, in general, will require up to four out of six tasks to be completed. Records still require rehabilitation and will need four out of six tasks completed in order to reach compliance.

## Pacific Division (CEPOD)

**Extent of Artifacts:** 42.39 ft<sup>3</sup>

**Extent of Associated Records:** 2.33 linear feet

**Number of Districts:** 2

**Number of Facilities Holding Collections:** 1

### Division Overview

CEPOD is responsible for an estimated 42.39 ft<sup>3</sup> of artifact collections and 2.33 linear feet of record collections housed in a single facility in one state. Honolulu District is not currently responsible for any archaeological collections. In general, collections under the Alaska District have not been rehabilitated. All cubic feet and linear feet measurements presented imply a level of accuracy that is not necessarily real. Collections, especially records, required measurement of less than a foot to ensure that small collections were not eliminated from the results. Although results are shown to the hundredth of a foot, all measurements are only estimates.

**Table 76.**  
**CEPOD Summary**

District	Cubic Feet	Linear Feet	# of Repositories	# of States
Alaska	42.39	2.33	1	1
Honolulu	None	None	None	None

## Alaska District (CEPOA)

**Extent of Artifacts:** 42.39 ft<sup>3</sup>

**Extent of Associated Records:** 2.33 linear feet

**Number of Facilities Holding Collections:** 1

### District Curation Overview

The small amount of collections that fall under the Alaska District have not been rehabilitated. Only minimal laboratory processing has occurred.

### District Collections Summary

Alaska District is responsible for only 42.39 ft<sup>3</sup> of artifact collections and 2.33 linear feet of record collections currently stored at one facility in Alaska (Table 77). See Tables 78 and 79 for project-by-project estimated collection size and average condition.

**Table 77.**  
**Current Location and Size of Alaska District Collections**

Facility	State	Cubic Feet	Linear Feet
University of Alaska Museum	AK	42.39	2.33

**Table 78.**  
**Average Rehabilitation Level of Artifacts by Project for Alaska District**

Project	Cubic Feet	Average Rehabilitation Level
Chena River Lakes	42.39	3

**Table 79.**  
**Average Rehabilitation Level of Records by Project for Alaska District**

Project	Linear Feet	Average Rehabilitation Level
Chena River Lakes	2.33	5

### Conclusions

Collections require a fair amount of effort to bring them into full compliance with rehabilitation requirements. Most of the Alaska District artifact collections still need three out of six tasks to be completed to meet compliance standards. Record collections are in somewhat worse condition and need five out of six tasks to be completed before they meet federal and Corps requirements.

## Honolulu District (CEPOH)

---

**Extent of Archaeological Artifacts:** n/a

**Extent of Associated Records:** n/a

**Number of Repositories:** n/a

---

### District Curation Overview

Hawaii District is not responsible for any archaeological collections from fee-title properties.

### District Collections Summaries

No archaeological artifact or record collections were identified for the Hawaii District.

## South Atlantic Division (CESAD)

**Extent of Artifacts:** 9,670.90 ft<sup>3</sup>

**Extent of Associated Records:** 1,151.35 linear feet

**Number of Districts:** 5

**Number of Facilities Holding Collections:** 28

### Division Overview

CESAD is responsible for an estimated 9,670.90 ft<sup>3</sup> of artifact collections and 1,151.35 linear feet of record collections housed in 28 facilities in 12 states. In general, the majority of the artifact and record collections in the South Atlantic Division have not been rehabilitated. However, two districts have upgraded a portion of their collections. All cubic feet and linear feet measurements presented imply a level of accuracy that is not necessarily real. Collections, especially records, required measurement of less than a foot to ensure that small collections were not eliminated from the results. Although results are shown to the hundredth of a foot, all measurements are only estimates.

**Table 80.**  
**CESAD Summary**

District	Cubic Feet	Linear Feet	# of Repositories	# of States
Charleston	400.12	30.52	1	1
Jacksonville	140.74	36.66	4	4
Mobile	7,528.52	958.92	14	6
Savannah	1,149.42	95.15	8	6
Wilmington	452.10	30.10	6	3

## Charleston District (CESAC)

**Extent of Artifacts:** 400.12 ft<sup>3</sup>

**Extent of Associated Records:** 30.52 linear feet

**Number of Facilities Holding Collections:** 1

### District Curation Overview

No large-scale efforts to rehabilitate collections from Charleston District have been conducted or are underway.

### District Collections Summary

Charleston District is responsible for 400.12 ft<sup>3</sup> of artifact collections and 30.52 linear feet of record collections currently stored at one facility in South Carolina (Table 81). See Tables 82 and 83 for project-by-project estimated collection size and average condition.

**Table 81.**  
**Current Location and Size of Charleston District Collections**

Facility	State	Cubic Feet	Linear Feet
University of South Carolina, South Carolina Institute of Anthropology and Archaeology	SC	400.12	30.52

**Table 82.**  
**Average Rehabilitation Level of Artifacts by Project for Charleston District**

Project	Cubic Feet	Average Rehabilitation Level
Atlantic Intracoastal Waterway	85.15	3
Cooper River Rediversion Canal	314.97	3

Project	Linear Feet	Average Rehabilitation Level
AtlanCooper River Rediversion Canal	7.85	6
Atlantic Intracoastal Waterway	0.57	6
Cooper River Rediversion Canal	22.10	6

### Conclusions

The artifact collections require three out of six tasks to be completed before they meet curation standards. Record collections are in worse condition and require six out of six tasks to be completed before they are in compliance.

## Jacksonville District (CESAJ)

**Extent of Artifacts:** 140.74 ft<sup>3</sup>

**Extent of Associated Records:** 36.66 linear feet

**Number of Facilities Holding Collections:** 4

### District Curation Overview

No large-scale efforts to rehabilitate collections from Jacksonville District have been conducted or are underway.

### District Collections Summary

Jacksonville District, although owning very little fee-title property, has oversight for archaeological artifact and record collections from various projects, primarily in Puerto Rico. Since responsibility of these collections was not clear, and they technically fell outside the boundaries of this project, consistent efforts were not made to conduct site visits specifically for Jacksonville District collections, although some information was collected when easily attainable. As such, the information presented here may not be complete. From the information gathered, Jacksonville District has oversight for 140.74 ft<sup>3</sup> of artifact collections and 36.66 linear feet of record collections currently stored at four facilities in Florida, Alabama, Georgia, and New York (Table 84). Additionally, Janus Research, St. Petersburg, Florida, is believed to house less than one linear foot of associated records from Jacksonville District, and Environmental Services, Jacksonville, is believed to house about one cubic foot and less than one linear foot of materials; however, these collections could not be confirmed. See Tables 85 and 86 for project-by-project estimated collection size and average condition.

**Table 84.**  
**Current Location and Size of Jacksonville District Collections**

Rio Grand de Manati	0.25	5
Rio Grande Survey	0.25	5
Rio Guanajibo	0.25	5
Voice of America	1.00	5

## Conclusions

Of the collections for which there is assessment information, most of the artifact collections require only two out of six tasks to be completed before they meet curation standards. Most of the record collections have not been upgraded and need five out of six tasks to be completed before they are in compliance.

## Mobile District (CESAM)

**Extent of Artifacts:** 7,528.52 ft<sup>3</sup>

**Extent of Associated Records:** 958.92 linear feet

**Number of Facilities Holding Collections:** 14

### District Curation Overview

Several efforts to rehabilitate portions of the Mobile District artifact and record collections from Carters Lake are underway and Lake Walter F. George.

Collections included in the Tennessee–Tombigbee Waterway have also undergone rehabilitation. However, most of the collections have not yet been upgraded.

### District Collections Summary

Mobile District is responsible for 7,528.52 ft<sup>3</sup> of artifact collections and 958.92 linear feet of record collections currently stored at 14 facilities in Alabama, Ohio, Georgia, Florida, Mississippi, and Illinois (Table 87). See Tables 88 and 89 for project-by-project estimated collection size and average condition.

University of Alabama Mobile Corps Records	263.85	2
Walter F. George Lock and Dam, AL & GA	11.04	3
West Point Lake	4.90	5

## Conclusions

The artifact collections that remain to be rehabilitated require four out of six tasks to be completed before they meet curation standards. Those artifact collections that have been rehabilitated do not need any further upgrades. Most of the record collections, in general, require only at least two out of six tasks to be completed before they are in compliance.

## Savannah District (CESAS)

**Extent of Artifacts:** 1,149.39 ft<sup>3</sup>

**Extent of Associated Records:** 95.15 linear feet

**Number of Facilities Holding Collections:** 8

### District Curation Overview

No large-scale efforts to rehabilitate Savannah District collections have been conducted or are underway.

### District Collections Summary

Savannah District is responsible for 1,149.39 ft<sup>3</sup> of artifact collections and 95.15 linear feet of record collections currently stored at eight facilities in Alabama, Georgia, South Carolina, Tennessee, Florida, and Texas (Table 90). Additionally, Southeastern Archaeological Services is believed to house 5 ft<sup>3</sup> of artifacts and one linear foot of associated records from Savannah District, and SouthArc, Gainesville, is believed to house less than one linear foot of artifacts; however, these collection could not be confirmed. See Tables 91 and 92 for project-by-project collection size and average condition.

**Table 90.**  
**Current Location and Size of Savannah District Collections**

Facility	State	Cubic Feet	Linear Feet

J. Strom Thurmond Lake	10.98	4
Richard B. Russell Lake and Dam, GA & SC	81.54	2

## Conclusions

Most of the artifact collections require three out of six tasks to be completed before they meet curation standards. Most of the record collections are in slightly better condition and only require two out of six tasks to be completed before they are in compliance.

## Wilmington District (CESAW)

**Extent of Artifacts:** 452.10 ft<sup>3</sup>

**Extent of Associated Records:** 30.10 linear feet

**Number of Facilities Holding Collections:** 6

### District Curation Overview

No large-scale efforts to rehabilitate Wilmington District collections have been conducted or are underway.

### District Collections Summary

Wilmington District is responsible for 452.10 ft<sup>3</sup> of artifact collections and 30.10 linear feet of record collections currently stored at six facilities in Virginia, North Carolina, and Georgia (Table 93). See Tables 94 and 95 for project-by-project estimated collection size and average condition.

Yadkin River	0.12	5

## Conclusions

Most of the artifact collections require five out of six tasks to be completed before they meet curation standards. A small portion of the artifact collections at one facility has been upgraded and requires only one out of six tasks to be completed. Most of record collections require six out of six tasks to be completed before they are in compliance.

## South Pacific Division (CESPD)

**Extent of Artifacts:** 3,268.78 ft<sup>3</sup>

**Extent of Associated Records:** 323.39 linear feet

**Number of Districts:** 4

**Number of Repositories:** 20

### Division Overview

CESPD is responsible for an estimated 3,268.78 ft<sup>3</sup> of artifact collections and 323.39 linear feet of record collections housed in 20 facilities in five states (see Table 96). In general, efforts to upgrade collections have been ongoing for some of the collections, although the majority of the collections under CESPD still need a fair amount of rehabilitation in order to comply with federal standards. All cubic feet and linear feet measurements presented imply a level of accuracy that is not necessarily real. Collections, especially records, required measurement of less than a foot to ensure that small collections were not eliminated from the results. Although results are shown to the hundredth of a foot, all measurements are only estimates.

**Table 96.  
CESPD Summary**

District	Cubic Feet	Linear Feet	# of Repositories	# of States
Albuquerque	1,528.37	171.37	7	3
Los Angeles	267.48	15.68	6	2

Sacramento	1,417.71	132.86	10	2
San Francisco	30.80	2.48	1	1

## Albuquerque District (CESPA)

**Extent of Artifacts:** 1,528.37 ft<sup>3</sup>

**Extent of Associated Records:** 171.37 linear feet

**Number of Facilities Holding Collections:** 7

### District Curation Overview

Albuquerque District has made several efforts towards upgrading its collections. The District has consolidated its collections into seven facilities in three states and maintains Cooperative Agreements with each curation repository. The District has repackaged the artifact collections in accordance with 36 CFR Part 79 and ER 1130-2-433. Some sorting still remains to be completed on the older collections. All collections are inventoried on computer. All paper records have been duplicated on acid-free paper. However, duplication of photographic materials has yet to be accomplished due to prohibitive cost. Efforts to upgrade packaging and remove contaminants in the record collections are completed on some of the collections.

### District Collections Summary

Albuquerque District is responsible for 1,528.37 ft<sup>3</sup> of artifact collections and 171.37 linear feet of record collections currently stored at seven facilities in New Mexico, Colorado, and Texas (Table 97). Additionally, the School of American Research, Sante Fe, New Mexico, is believed to house about one linear foot of records from the Albuquerque District; however, this information could not be confirmed. See Tables 98 and 99 for project-by-project estimated collection size and average condition.

**Table 99.**  
**Average Rehabilitation Level of Records by Project for Albuquerque District**

Project	Linear Feet	Average Rehabilitation Level
Abiquiu Dam	29.83	3
Cochiti Lake	49.31	2
Conchas Lake	0.60	3
Cuchillo Dam	0.12	3
Jemez Canyon Dam	0.12	3
John Martin Reservoir	8.19	0
Keystone Dam	9.38	3
Las Cruces Dam	0.12	2
Santa Rosa Lake	34.16	1
Trinidad Lake	39.04	1
Two Rivers Dam	0.50	3

## Conclusions

Collections require a minimal amount of effort to bring them into full compliance with rehabilitation requirements. Most of the Albuquerque District artifact collections still need one out of six tasks to be completed to meet compliance standards. Most record collections need two-to-three out of six tasks to be completed before they meet federal and USACE requirements.

## Los Angeles District (CESPL)

**Extent of Artifacts:** 267.48 ft<sup>3</sup>

**Extent of Associated Records:** 16.98 linear feet

**Number of Facilities Holding Collections:** 6

### District Curation Overview

No large-scale efforts to rehabilitate collections from the Los Angeles District have been conducted or are underway.

### District Collections Summary

Los Angeles District is responsible for 267.48 ft<sup>3</sup> of artifact collections and 16.98 linear feet of record collections currently stored at six facilities in California and Arizona (Table 100).

Additionally, the University of Nevada, Las Vegas, is believed to house less than one linear foot of records from Los Angeles District; however, these collections could not be confirmed. See Tables 101 and 102 for project-by-project estimated collection size and average condition.

**Table 100.**  
**Current Location and Size of Los Angeles District Collections**

Painted Rock Dam	4.87	1
Prado Flood Control Basin	6.65	6
Sepulveda Flood Control Basin	0.45	5
Sweetwater Flood Control Project	3.37	6

## **Conclusions**

Collections require a fair amount of effort to bring them into full compliance with rehabilitation requirements. Most of the Los Angeles District artifact collections still need four out of six tasks to be completed to meet compliance standards. Record collections need six out of six tasks to be completed before they meet federal and Corps requirements.

## Sacramento District (CESPK)

**Extent of Artifacts:** 1,417.71 ft<sup>3</sup>

**Extent of Associated Records:** 132.86 linear feet

**Number of Facilities Holding Collections:** 10

### District Curation Overview

The Sacramento District has not conducted any large-scale rehabilitation work but has inventoried portions of their collections.

### District Collections Summary

Sacramento District is responsible for 1,417.71 ft<sup>3</sup> of artifact collections and 132.86 linear feet of record collections currently stored at 10 facilities in California (one facility in Texas holds a very minute amount of records) (Table 103). See Tables 104 and 105 for project-by-project estimated collection size and average condition.

**Table 103.**

Russian River Reservoir	1.01	5
Terminus Dam and Lake Kaweah	0.40	5
Warm Springs Dam and Lake	41.92	4
Yuba City Debris Control	0.28	6

## Conclusions

Collections require a fair amount of effort to bring them into full compliance with rehabilitation requirements. Most of the Sacramento District artifact collections still need three out of six tasks to be completed to meet compliance standards. Record collections are in somewhat worse condition and need five-to-six out of six tasks to be completed before they meet federal and USACE requirements.

## San Francisco District (CESPN)

**Extent of Artifacts:** 30.8 ft<sup>3</sup>

**Extent of Associated Records:** 2.48 linear feet

**Number of Facilities Holding Collections:** 1

### District Curation Overview

No large-scale efforts to rehabilitate collections from the San Francisco District have been conducted or are underway.

### District Collections Summary

San Francisco District is responsible for 30.8 ft<sup>3</sup> of artifact collections and 2.48 linear feet of record collections currently stored at one facility in California (Table 106). Additionally, California State University, Hayward is believed to house less than one cubic foot of artifacts from San Francisco District, and the Santa Cruz City Museum believes it has a collection on loan from the district; however, these collections could not be confirmed. See Tables 107 and 108 for project-by-project estimated collection size and average condition.

**Table 106.**  
**Current Location and Size of San Francisco District Collections**

Facility	State	Cubic Feet	Linear Feet
San Francisco State University, Adan E. Treganza Anthropology Museum	CA	30.80	2.48

**Table 107.**  
**Average Rehabilitation Level of Artifacts by Project for San Francisco District**

Project	Cubic Feet	Average Rehabilitation Level
Alameda Creek Flood Control	22.13	3
Not Determined	8.67	2

**Table 108.**  
**Average Rehabilitation Level of Records by Project for San Francisco District**

Project	Linear Feet	Average Rehabilitation Level
Alameda Flood Control Project	1.28	4
Not Determined	1.20	4

### Conclusions

Collections from San Francisco require some effort to bring them into full compliance with rehabilitation requirements. The majority of the District artifact collections still needs three out of six tasks to be completed to meet compliance standards. Record collections are in somewhat worse condition and need four out of six tasks to be completed before they meet federal and USACE requirements.

## Southwestern Division (CESWD)

**Extent of Artifacts:** 8,184.65 ft<sup>3</sup>

**Extent of Associated Records:** 543.33 linear feet

**Number of Districts:** 4

**Number of Facilities Holding Collections:** 28

### Division Overview

CESWD is responsible for 8,183.65 ft<sup>3</sup> of artifact collections and 543.33 linear feet of record collections housed in 28 facilities in six states. In general, some of the artifact and record collections in the Southwestern Division have been rehabilitated or are undergoing rehabilitation, but the majority are in fair condition. Southwestern Division is currently drafting a Cooperative Agreement with the Texas Archaeological Research Laboratory, University of Texas to house archaeological collections from Texas. All cubic feet and linear feet measurements presented imply a level of accuracy that is not necessarily real. Collections, especially records, required measurement of less than a foot to ensure that small collections were not eliminated from the results. Although results are shown to the hundredth of a foot, all measurements are only estimates.

**Table 109.**  
**CESWD Summary**

District	Cubic Feet	Linear Feet	# of Repositories	# of States
Ft. Worth	1,858.45	317.16	10	2
Galveston	2,274.74	31.98	5	2
Little Rock	960.60	56.31	6	3
Tulsa	3,090.86	137.88	17	3

## Fort Worth District (CESWF)

**Extent of Artifacts:** 1,858.45 ft<sup>3</sup>

**Extent of Associated Records:** 317.16 linear feet

**Number of Facilities Holding Collections:** 10

### District Curation Overview

Coalescing and rehabilitation of most of the collections still remains to be done, although efforts are underway to transfer some collections to a central location. A small amount of rehabilitation on some of the collections is taking place but no large-scale efforts have been made yet to upgrade the major portion of the District's collections.

### District Collections Summary

Fort Worth District is responsible for 1,858.45 ft<sup>3</sup> of artifact collections and 317.16 linear feet of record collections currently stored at 10 facilities in Texas and Oklahoma (Table 110). See Tables 111 and 112 for project-by-project estimated collection size and average condition.

Wright Patman Lake	2.12	4

## Conclusions

The artifact collections in general need four-to-six tasks out of six tasks to be completed to reach curation standards. The record collections also need four-to-six out of six tasks to be completed to bring them into compliance with regulation.

## Galveston District (CESWG)

**Extent of Artifacts:** 2,274.74 ft<sup>3</sup>

**Extent of Associated Records:** 31.98 linear feet

**Number of Facilities Holding Collections:** 5

### District Curation Overview

Galveston District is currently upgrading its artifact collections to meet curation standards. The collections currently located at contractor offices will be sent to permanent curation repositories when the contract is completed. Many of the artifact collections are undergoing rehabilitation. However, the record collections still require rehabilitation.

### District Collections Summary

Galveston District is responsible for 2,274.74 ft<sup>3</sup> of artifact collections and 31.98 linear feet of record collections currently stored at five facilities in Texas and Louisiana (Table 113). See Tables 114 and 115 for project-by-project estimated collection size and average condition.

**Table 113.**

Gen. C. B. Comstock Wreck	0.82	4
Miscellaneous	25.60	4
Trinity River Basin	0.62	4
Wallisville Lake	1.75	6

## **Conclusions**

The artifact collections conditions vary since they are currently being upgraded. They require from four-to-one tasks out of six that need to be completed to meet standards. The record collections still need to be rehabilitated. Most of the record collections will require four out of six tasks be completed to bring them into compliance with regulations.

## Little Rock District (CESWL)

**Extent of Artifacts:** 960.6 ft<sup>3</sup>

**Extent of Associated Records:** 56.31 linear feet

**Number of Facilities Holding Collections:** 6

### District Curation Overview

A portion of the Little Rock District artifact and record collections has been rehabilitated and does not require any further upgrades. However, most of the collections still are in need of rehabilitation.

### District Collections Summary

Little Rock District is responsible for 960.6 ft<sup>3</sup> of artifact collections and 56.31 linear feet of record collections currently stored at six facilities in Arkansas, Missouri, and Oklahoma (Table 116). Additionally, the Arkansas Archaeological Survey, Arkansas Tech University, Russellville is believed to house about 4 ft<sup>3</sup> of artifacts and 12 linear feet of associated records from Little Rock District; however, these collections could not be confirmed. See Tables 117 and 118 for project-by-project estimated collection size and average condition.

Norfork Lake	3.96	4
Not Determined	0.31	4
Ozark Lake	1.20	4
Prosperity Lake	0.31	5
Table Rock Lake	11.80	6

## Conclusions

On average, the artifact collections need three out of six tasks completed before they meet curation standards. The records are in somewhat worse condition. About two-thirds need four out of six tasks to be completed; the other third needs all six tasks to be completed before they meet compliance regulations.

## Tulsa District (CESWT)

**Extent of Artifacts:** 3,090.86 ft<sup>3</sup>

**Extent of Associated Records:** 137.88 linear feet.

**Number of Facilities Holding Collections:** 17

### District Curation Overview

No large-scale efforts to rehabilitate collections from the Tulsa District have been conducted or are underway.

### District Collections Summary

Tulsa District is responsible for 3,090.86 ft<sup>3</sup> of artifact collections and 137.88 linear feet of record collections currently stored at 17 facilities in Oklahoma, Kansas, and Texas (Table 119). See Tables 120 and 121 for project-by-project estimated collection size and average condition.

## Conclusions

An inventory of some of the collections has been undertaken by the district. Coalescing and rehabilitation of the collections still remain to be done. The artifact collections condition is variable, ranging from two to six tasks out of six that need to be completed. The record collections are also in variable condition, depending on the repository. Most record collections need moderate to substantial efforts (four to five tasks remaining) to rehabilitate them to standards.

## 4

# Findings Summary

Over eight hundred facilities were contacted to inquire about the presence of USACE archaeological artifact and record collections. Once a list of facilities holding USACE archaeological collections had been generated, St. Louis District personnel, in conjunction with its representative contractors, conducted site visits to gather information regarding archaeological collection estimated size, content, and condition. As a result, 166 facilities in 44 states were determined to currently hold USACE archaeological artifact and/or record collections (Table 122). Eighteen facilities believed to house small USACE collections that were sent mail surveys did not respond and collections, therefore, could not be confirmed to exist and were not included in the following findings. In all, 37 districts are responsible for 46,522 cubic feet of artifact collections and 3,511 linear feet of associated documentation (Table 123).

**Table 122.**  
**Number of Facilities Housing USACE Collections by State**

State	Number of Districts	Number of Facilities	Cubic Feet	Linear Feet
Alaska	1	1	42.39	2.33

Wilmington	3	6	452.10	30.10

Some efforts by individual districts are underway to upgrade artifact and record collections ; however, most of USACE archaeological collections still need moderate, and in some cases extensive, rehabilitation to meet requirements of 36 CFR Part 79 and ER 1130-2-540. Tables 124, 125, and 126 present the average rehabilitation level of collections by project. Again, the lower the rehabilitation level, the less rehabilitation that is required to bring the collections into compliance. The information in the following tables is divided into three levels of rehabilitation: minimal (0–1), moderate (2–4), and substantial (5–6).

**Table 124.**  
**Number of Projects Currently with an Average of Rehabilitation Level 0–1 by District**

## FINDINGS SUMMARY

**Table 126. (Continued)**  
**Number of Projects Currently with an Average of Rehabilitation Level 5–6 by District**

District	Total Number of Projects (Artifacts)	Number of Projects with Artifacts at Level 5–6	Total Number of Projects (Records)	Number of Projects with Records at Level 5–6
Vicksburg	35	2	29	6
Walla Walla	10	1	11	1
Wilmington	10	2	8	5

Minimally, the following can be concluded:

1. Sixteen percent of projects producing artifact collections and twelve percent of projects producing record collections require almost no additional rehabilitation for artifacts to meet federal standards outlined in 36 CFR Part 79 and ER1130-2-540.

2. Seventy-two percent of projects producing artifact collections and fifty-three percent of projects producing record collections require moderate rehabilitation for artifacts to meet federal standards outlined in 36 CFR Part 79 and ER1130-2-540.

3. Twelve percent of projects producing artifact collections and thirty-five percent of projects producing record collections require substantial rehabilitation to meet federal standards outlined in 36 CFR Part 79 and ER1130-2-540.

In general, archaeological collection condition, as determined by the assessment, indicates that several districts have already neared completion of work for rehabilitation. Most districts, however, still are responsible for collections that require rehabilitation (see Tables 127 and 128).

## Glossary

In chemistry, materials that have a pH of 7.0 or higher are said to be **acid-free**. Sometimes the term is used incorrectly as a synonym for alkaline or buffered. Such materials may be produced from virtually any cellulose fiber source (cotton and wood, among others), if measures are taken during manufacture to eliminate the active acid from the pulp. However free of acid paper or board may be immediately after manufacture, over time the presence of residual chlorine from bleaching, aluminum sulfate from sizing, or pollutants in the atmosphere may lead to the formation of acid unless the paper or board has been buffered with an alkaline substance.

**Archival, archivally stable, or archival quality** containers refer to those collections or records housing systems in which the material from which the container is made has been chemically treated so as to make the container acidfree or noncontaminating. When a container has been made acidfree, the pH of that container becomes very close to the absolute neutral pH value, seven. An example of such a container is an acid-free cardboard or paper box. Also, certain kinds of polyester and plastic boxes or zip-lock bags also can be considered archival, if they are made from materials such as polyethylene or polypropylene. For plastic zip-lock bags to be considered archival and meeting the compliance standard, the bags, normally used as secondary containers, must be made out of an archivally stable material and the thickness should be at least 4 mil (mil referring to the unit of thickness equaling one thousandth of an inch) or of an adequate thickness to accommodate the artifacts.

An **archivist** is a person professionally educated, trained, experienced, and engaged in the administration of archival materials, and all the tasks therein.

**Arrangement** is the process and result of organizing archives, records, and manuscripts in accordance with accepted archival principle, particularly provenance, at as many as necessary of the following levels: repository, record group, subgroup, series, file unit, and document.

**Associated records/associated documentation** are all original records (or copies thereof) that have been prepared and/or assembled in the efforts to locate, evaluate, record, study, preserve, or recover prehistoric or historic resources.

A **catalog** is a listing of materials with descriptive details, usually arranged systematically.

**Cataloging** is the process of assigning and applying a unique identifying number to an object and completing the written documentation of this process.

**Collections** are material remains that have been excavated or removed during a survey, excavation, or other study of prehistoric or historic resources. Collections also include associated records that are prepared or assembled during survey, excavation, or other study.

## GLOSSARY

**Conservation** is the treatment of library or archive materials, works of art, or museum objects to stabilize them chemically or strengthen them physically, sustaining their survival as long as possible in their original form.

A **conservator** is a professional trained in the arts and sciences relating to the theoretical and practical aspects of preserving materials.

A **copy** is a reproduction of the contents of an original document.

**Cubic foot** is a standard measurement used for descriptive and control purposes of shelf space occupied by artifacts (i.e., volume).

**Curation** is the long-term, professional management and care of all objects, materials, and records recovered as the result of a federal or nonfederal archaeological undertaking.

**Curatorial services** manage and preserve collections according to professional museum and archival practices.

The term **damage** refers to primary containers that have been water damaged, fire damaged, crushed, or subject to insect or rodent infestation. Damage may result from the overpacking of containers. Examples of secondary container damage include smeared writing on a bag, tears or punctures of a bag, or ink that is causing chemical deterioration of a bag (thinning and yellowing of the container).

**Deaccession** is the formal procedure whereby objects or records are permanently removed from a repository's holdings.

**Electronic records:** Records and archives whose informational content usually is in code and has been recorded on media such as magnetic discs, drums, tapes, punched paper cards, or punched paper tapes and are accompanied by finding aids known as software documentation. The coded information is retrievable only by machine. Also referred to as **machine-readable** or **machine-dependent records**.

**Finding aids** are the descriptive media, published and unpublished, created by an originating office, an archival agency, or manuscript repository to establish physical or administrative and intellectual control over records and other holdings.

**Holdings** are the total accessions and deposits of a repository, installation, institution, or agency.

**Inventory** is the process of creating and maintaining a contemporaneous record of all objects for which a repository is responsible. An inventory is also an itemized listing of objects.

**Linear feet** is a measurement used for descriptive and control purposes of shelf space occupied by documents (i.e., extent). Linear feet, except for card indexes and oversized materials, may be equated with cubic feet on a one-to-one basis for description of textual records (of either letter or legal-size).

A **loan** is the temporary transfer of objects from a repository to a museum or other repository. These transfers do not involve a change in ownership.

**Nonarchival** containers refer to those containers that have not been treated to chemically alter their natural acid levels. Regular cardboard, paper, and most plastics, except for the ones stated above, are highly acidic and unstable and, therefore, are considered nonarchival.

**Polyethylene** is a chemically stable, highly flexible, transparent or translucent plastic. Used in preservation to make sleeves for photographic materials, among other uses.

**Polypropylene** is a stiff, heat resistant, chemically stable plastic. Common uses in preservation include sleeves for 35-mm slides or films and containers.

**Preservation** is the basic responsibility to provide adequate facilities for the protection, care, and maintenance of records and artifacts.

A **primary container** is the largest containment unit in which the archaeological collections or records are stored. Objects and records may be housed in a secondary container, which is housed within the primary container. Examples of primary containers include boxes, metal or wooden file drawers, and map cases.

**Processing**, in archival work, is the act of arranging, describing, and preserving a collection of documentation.

**Qualified museum professionals** are persons who possess the knowledge, experience, and demonstrable competence in museum methods and techniques that (1) are appropriate to the nature and content of the collections under the person's management and care and (2) are commensurate with the person's duties and responsibilities.

**Records management** is that area of general administrative management concerned with achieving economy and efficiency in the creation, use and maintenance, and disposition of records.

A **repository** is a facility such as a museum, archaeological center, laboratory, or storage facility that is managed by a university, college, museum, other educational or scientific institution, a federal, state, or local government agency, or Indian tribe that can provide professional, systematic, and accountable curatorial services on a long-term basis.

A **secondary container** is the containment unit in which the artifacts or records are directly stored. Examples of secondary containers include paper bags, plastic bags, film vials, aluminum foil, and file folders.

**Volume** is the term used to describe the physical space occupied by a collection.

### Record Formats

Format	Presence/Absence	Extent	Condition <sup>1</sup>
<i>Paper Records</i>			
<i>Photographic Records</i>			
<i>Color</i>			
<i>Black and White</i>			
<i>Electronic Records</i>			
<i>Audio Visual Records</i>			
<i>Cartographic Records</i>			
<i>Other:</i>			

<sup>1</sup>Condition refers to the level of rehabilitation necessary for compliance and is based upon the following six tasks: (a) physical arrangement of the materials in some sort of logical order; (b) packaging of materials in archival files; (c) appropriate (i.e., consistent) labeling of all file folders; (d) packaging of files in archival boxes (i.e., primary containers); (e) creation of a finding aid; and (f) duplicate copy has been made. **RECORD HOW MANY TASKS (from 0 to 6) FROM THE ABOVE LIST THAT REMAIN TO BE COMPLETED FOR EACH RECORD FORMAT IN THE "CONDITION" COLUMN.**

COMMENTS:

**Primary Container Information**  
**(if summary, include total number of each type)**

	Acidic Box N = ____	Archival Box N = ____	Drawers N = ____	Archival Other N = ____	Nonarchival Other N = ____
<i>Damaged?</i>					
<i>Yes</i>					
<i>No</i>					
<i>Dimensions (if summary, use average)</i>					
<i>Length</i>					
<i>Width</i>					
<i>Height</i>

### Secondary Containers

	Plastic Bags	Nonarchival Other	Archival Other
% that needs replacement			

COMMENTS:

### Material Classes

Scale: 1 = most represented

	Prehistoric	Historic	Unknown	Washed	Sorted	Labeled
<i>Lithics</i>						
<i>Ceramics</i>						
<i>Whole vessels</i>						
<i>Fragments</i>						
<i>Fauna</i>						
<i>Modified Bone</i>						
<i>Shell (unmodified)</i>						
<i>Modified Shell</i>						
<i>Botanical</i>						
<i>Flotation</i>						
<i>Soil</i>						
<i><sup>14</sup>C</i>						
<i>Human Skeletal Remains</i>						
<i>Brick/Masonry</i>						
<i>Metal</i>						
<i>Glass</i>						
<i>Textiles</i>						
<i>Leather</i>						
<i>Other:</i>						

<sup>1</sup>Material classes should be ranked ordinally, by amount (e.g., if prehistoric lithics is the largest category, place a "1" in the prehistoric lithics category; the next largest category would receive a "2" and so on).

<sup>2</sup>For washed, sorted, and labeled categories, use the following scale: For 50% or more, state "yes." If less than 50% are washed, sorted, or labeled, state "no."

MEMORANDUM FOR SEE DISTRIBUTION

SUBJECT: Combined Department of Defense and U. S. Army Corps of Engineers Curation Assessment Project

1. References:

a. Office of the Assistant Secretary of the Army (Civil Works) Memorandum, dated 10 Oct 97, subject: Department of Defense-Wide Curation Strategy.

b. CECW-ZA Memorandum, dated 6 Nov 97, subject: Department of Defense-Wide Curation Strategy.

2. Reference 1a (enclosed) details the Department of Defense (DoD) Partnership or Curation Options Program. This program is designed to identify partnership opportunities with curation facilities that meet Federal archeological curation standards and are interested in long-term care of DoD archeological collections. The U. S. Army Corps of Engineers interest in participating in this DoD program is expressed in the enclosed reference 1b.

3. The Mandatory Center of Expertise for Curation and Management of Archeological Collections (MCX CMAC) has prepared the enclosed Scope of Work (SOW) for the Corps-side effort of the DoD Curation Strategy. Within your command, cultural resource specialists and managers will have an interest in receiving the SOW and cooperating with the MCX CMAC efforts. Inquiries about this project should be directed to the Commander, St. Louis District, ATTN: CELMS-PD-C, Dr. Michael Trimble, Director, MCX CMAC. Dr. Trimble can be contacted thru the Corps electronic mail system, or by telephone at (314) 331-8466.

CECW-OM

MEMORANDUM FOR THE ASSISTANT SECRETARY OF THE ARMY (CIVIL WORKS)

SUBJECT: Department of Defense-Wide Curation Strategy

1. This is in response to your memorandum dated 10 October 1997, emphasizing the need to expedite efforts in order to complete preliminary curation work by the end of Fiscal Year 1999, in accordance with Department of Defense-wide goals.
2. I will support this initiative, as described in your memorandum.

FOR THE COMMANDER:

  
RUSSELL L. FUHRMAN  
Major General, USA  
Director of Civil Works

REPLY TO

DEPARTMENT OF THE ARMY  
OFFICE OF THE ASSISTANT SECRETARY  
CIVIL WORKS  
108 ARMY PENTAGON  
WASHINGTON DC 20310-0108  
10 OCT 1997

MEMORANDUM FOR DIRECTOR OF CIVIL WORKS

SUBJECT: Department of Defense-Wide Curation Strategy

I am writing to you concerning a high priority initiative to develop a long-term Department of Defense-wide (DoD) curation strategy. The Deputy Under Secretary of Defense (Environmental Security) intends to complete the preliminary work necessary, by the end of 1999, to develop and implement a long-term curation strategy designed to address long-standing problems with lost and damaged collections, and collections at risk due to sub-standard care. DoD will be developing curation standards and policies, and a DoD-wide data base. As you may know, all of DoDs preliminary curation work is being done by the Army Corps of Engineers Mandatory Center of Expertise for Curation (MCX) located at the St. Louis District. The MCX is a recognized leader in the curation field.

However, it has been brought to my attention that the civil works preliminary curation work schedule is out of synch with the preliminary curation work schedule for the rest of the DoD. While the Corps has made great strides in the curation arena, by establishing the MCX and expediting work required under the Native American Graves Protection and Repatriation Act (NAGPRA) as subset of the overall curation program, there is a critical need to expedite the two preliminary curation efforts described below to rectify deficiencies.

The DoD-wide Curation Strategy calls for the completion of a *Partnership Program* and an *Assessment Program* by the end of FY 1999. Under the *Partnership Program* potential repositories for DoD collections will be identified, screened, and evaluated. The objective is to identify up to 4 recommended repositories per State, although some parts of the country may have to have multi-State repositories due to a paucity of facilities from which to chose. Military installations, and Corps districts and divisions, will use the recommendations developed by the MCX to select appropriate repositories for collections under their jurisdiction. The *Assessment Program* is designed to locate all DoD collections and compile basic information on the physical condition of the collections that can be used to develop reliable estimates for inventory, restoration, interpretation, and long-term storage activities.

OASA(CW)

SUBJECT: Department of Defense-Wide Curation Strategy

The Corps MCX will complete all work for both programs for all of DoD, except civil works, by the end of FY 99. The major reason for this is because the rest of DoD benefitted greatly by being able to use funds from the Legacy Resource Management Program. Conversely, the Corps had to fund its curation activities in competition with all of the activities in the O&M budget. Recognizing that funds were limited, the Corps wisely chose to focus on NAGPRA work because of the sensitivities involved with human remains. Relatively little funding went to the overall curation effort. Over the past several years the MCX has been able to integrate certain civil works and DoD *Partnership Program* efforts. However, the Corps *Partnership Program* work is now lagging behind the DoD schedule, particularly in the western region where all DoD work was completed in July 1997. A second, and larger problem, is that no *Assessment Program* work has been done by the Corps, and little is scheduled for FY 99. Although the Corps has made provisions for districts to budget for curation work beginning in FY 99, it will take many years to complete all of the necessary *Assessment Program* work. The DUSD(ES) is very concerned about this situation because 75 percent of DoD collections can be attributed to civil works. It will be difficult to make the desired progress on the DoD-wide long-term curation strategy.

Therefore, acting on behalf of DoD, the DUSD(ES) asked this office to see what could be done to expedite our work for both the *Partnership* and *Assessment Programs* with the ultimate objective of bringing the Corps schedule in line with the overall DoD schedule. My staff have been working with your staff to discuss the issues and explore options for bringing Corps efforts in line with DoD efforts. As a result of two recent meetings, I believe that strategies have been identified which will enable you to accelerate the Corps *Partnership Program* work and also complete the necessary *Assessment Program* work for civil works collections by the end of FY 99.

I recommend that the FY 99 O&M budget be modified as discussed by our staff to include \$300,000 "within ceiling" for the *Partnership Program*. Of that sum, \$75,000 would cover the costs to accelerate the work and result in completion by the end of FY 99. In order to remedy the deficiency for the Corps *Assessment Program* the Corps NAGPRA effort for FY 98 should be leveled to match the FY 97 effort of \$1 million. Thus, if the \$1.5 million amount currently in the budget for FY 98 is provided to the Corps for the NAGPRA/Curation account, most of the

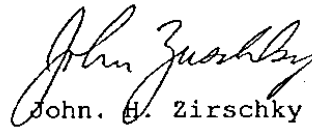

OASA(CW)

SUBJECT: Department of Defense-Wide Curation Strategy

\$500,000 overage would be used to complete the Corps Assessment Program work. Refer to the enclosure which briefly summarizes implementation plans for the two programs.

The solution described above will enable the MCX to complete all *Partnership and Assessment Program* work for civil works collections on a schedule which matches the DoD schedule. Significant cost and scientific efficiencies will continue to be realized by leveraging Corps work with DoD work. No additional funds will be required from the O&M budget, or be diverted from non-curation programs, projects, or activities for the *Assessment Program*, and the Corps NAGPRA work will continue at an acceptable pace. This strategy will help bring to closure the long-standing issues about the location and condition of items of National heritage under our stewardship. Corps districts will have high quality information on repositories and collections upon which to base their estimates for follow-on long-term curation management efforts (inventories and rehabilitation) through the standard budget process.

I appreciate your support for this important initiative. Please do not hesitate to contact me if you have any questions.

John. H. Zirschky  
Acting Assistant Secretary of the Army  
(Civil Works)

CIVIL WORKS PARTNERSHIP PROGRAM  
(Identify Repositories)

ACCELERATE SCHEDULE TO MATCH DoD SCHEDULE

COMPLETE PARTNERSHIP WORK BY END OF FY 99

FINANCIAL DATA (FY 97-99 = \$474,000)

- FY 97 - \$52,000 EXPENDED
- FY 98 - \$167,000 ALLOCATED
- FY 99 - MODIFY BUDGET TO INCLUDE \$300,000 FOR THE PARTNERSHIP PROGRAM
  - INCLUDES \$75,000 FOR INCREASED LABOR COSTS TO ACCELERATE THE SCHEDULE
  - FLAG ENTIRE \$300,000 AS "WITHIN CEILING"

CIVIL WORKS ASSESSMENT PROGRAM  
(Locate and Assess Condition)

ACCELERATE SCHEDULE TO MATCH DoD SCHEDULE

COMPLETE ASSESSMENT WORK BY END OF FY 99

USE NAGPRA/CURATION ACCOUNT

IF \$1.5 MILLION REMAINS IN BUDGET:

- HAVE FY 98 NAGPRA EFFORT MATCH FY 97 EFFORT (\$1 MILLION)
- USE MOST OF THE REMAINING \$500,000 FOR ASSESSMENT WORK

## Corps Assessment Project

### Scope of Work

In FY98, the Mandatory Center of Expertise for the Curation and Management of Archaeological Collections (MCX-CMAC), will perform the following tasks as part of the Corps Civil Works Assessment Project.

a. With information from Corps District cultural resource personnel and using information gathered from the Corps NAGPRA program, MCX-CMAC will develop a preliminary list of repositories housing Corps archaeological collections.

b. Telephone calls to repositories will be made to verify the presence or absence of collections and to ascertain approximate collection size (if unknown) for planning purposes. Based on funding and time considerations, a priority list of repositories to be visited during FY98 will be compiled.

c. Once collections are located, MCX-CMAC, with assistance from its regional contractors, will conduct site visits to the repositories. Information will be collected, when available, on standardized MCX-CMAC data sheets regarding

1. collection names, size, and composition
2. general collection packaging information
3. general collection contaminants
4. general collection condition

Corps District and Division cultural resource points of contacts will be notified before site visits are conducted and will be welcome to attend the assessments. Scheduling of site visits will be made in conjunction with other MCX-CMAC project site visits when possible in order to reduce repository intrusions. Site visits are scheduled to be completed by September 1998.

d. A draft report will be prepared by MCX-CMAC that coalesces information gathered.

e. District cultural resource points of contact will provide comments on the draft report.

f. A final report will be prepared and forwarded to HQUSACE in FY99.

The MCX-CMAC project point of contact is Rhonda Lueck at (314) 331-8798, ([lueck@smtp.mvs.usace.army.mil](mailto:lueck@smtp.mvs.usace.army.mil)). Information can also be obtained from MCX-CMAC Regional Coordinators.

## **Appendix 10**

### **Mail Survey Forms**

---

## INSTRUCTIONS AND DEFINITIONS

### INSTRUCTIONS

1. In order for a collection and/or its associated records to be considered Corps of Engineers responsibility, the materials must have been generated from (1) a Corps of Engineer fee-title property or (2) Corps sponsorship on a Corps project (e.g., collections generated from surveys directed and sponsored by the Corps for the anticipated inundation/construction of Table Rock Reservoir). Fee-title properties are those for which the Corps of Engineers has outright legal ownership. Collections resulting from any Corps of Engineers permit action alone, therefore, are not to be included in the assessment. Also, collections from any military property (e.g., Ft. Stewart), although possibly contracted by or through the Corps, should not be included. In situations where a district has assumed legal responsibility for a collection not derived from fee-title land, these materials should be assessed. Orphaned collections should also be assessed.
2. For each separate Corps of Engineer district represented in your collections or records, a separate objects condition and records condition form needs to be completed. Do not combine all Corps of Engineer District collections on one form, if more than one district is represented. If you are not sure which districts are represented in your collections, please separate each project/collection and be sure to list the site numbers.
3. Please attempt to fill out forms, not only for each district, but also for each overall project/collection (e.g., Truman Reservoir).

### DEFINITIONS

1. Archival: Archival containers refer to those collections or records housing systems in which the material that the container is made out of has been chemically treated so as to make the container acid-free or noncontaminating. When a container has been made acid-free, the pH of that container becomes very close to the absolute neutral pH value, seven. An example of such a container is an acid-free cardboard or paper box. Also, certain kinds of polyester and plastic boxes or zip-lock bags can also be considered archival, if they are made from materials such as polyethylene or polypropylene. **NOTE:** For plastic zip-lock bags to be considered archival and meeting the compliance standard, the bags, normally used as secondary containers, must be made out of an archivally stable material and the thickness should be at least 4 mil (mil referring to the unit of thickness equaling one thousandth of an inch) or of an adequate thickness to accommodate the artifacts.
2. Nonarchival: Nonarchival containers refer to those containers that have not been treated to chemically alter their natural acid levels. Regular cardboard, paper, and most plastics, except for the ones stated above, are highly acidic and unstable and, therefore, are considered nonarchival.
3. Primary Container: A primary container is the largest containment unit in which the archaeological collections or records are stored. Objects and records may be housed in a secondary container, which is housed within the primary container. Examples of primary containers include boxes, metal or wooden file drawers, map cases, etc.

4. Secondary Container: A secondary container is the containment unit in which the artifacts or records are directly stored. Examples of secondary containers may include paper bags, plastic bags, film vials, aluminum foil, and file folders.

5. Damaged: This condition refers to, in this case, primary containers that have been water damaged, fire damaged, crushed, or subject to insect or rodent infestation. Damage may result from the overpacking of containers. **NOTE:** In the event that ARCHIVAL secondary containers are damaged, please note the type of damage and its extent in terms of a percentage in the Comments section. Examples of secondary container damage include smeared writing on a bag, tears or punctures of a bag, or ink that is causing chemical deterioration of a bag (thinning and yellowing of the container).

### MATERIAL CLASS COMPOSITION

Using the material class table provided below, ordinaly rank the collection's various kinds of artifacts BY VOLUME, with 1 indicating the most voluminous (or the most represented) material class. (For Example: If prehistoric lithics is the largest category, place a 1 in the prehistoric lithics field; if historic ceramics is the next largest category, place a 2 in the historic ceramics field, and so on).

### MATERIAL CLASS CONDITION

The last column in the Material Class table is titled Condition. In this field, you will need to record letters representing the six general rehabilitation tasks necessary for compliance. Only write the letter relating to the rehabilitation task if the task has ALREADY BEEN COMPLETED for that particular material class.

#### Six Rehabilitation Tasks:

- (A) cleaning
- (B) sorting
- (C) directly labeling artifacts (when applicable)
- (D) bagging of materials in appropriate archival containers and labeling of each container
- (E) inserting acid free labels in each secondary container
- (F) storing the materials in archival primary containers and labeling containers

(For example : If all of the prehistoric lithics have been cleaned, sorted, and directly labeled, but none of the other tasks have been completed, you would write A B C in the Condition column for lithics).

	Prehistoric	Historic	Unknown	Level <sup>2</sup>
<i>Lithics</i>				
<i>Ceramics</i>				
<i>Whole vessels</i>				
<i>Fragments</i>

COMMENTS:

## RECORD FORMATS

### RECORD EXTENT

If a records format is present, record the extent of the record according to the notation in the Record Format column. (For example: If there are 25 linear inches of paper records present, record 25 inches in the Extent column. Estimate linear extent or describe the records if you are unsure of the linear extent (e.g., 4 map tubes of cartographic records, each 1 ½ in diameter)).

### RECORD CONDITION

The last column in the Record Formats table is titled Condition. In this field, you will need to record letters representing the six general rehabilitation tasks necessary for compliance. Only write the letter relating to the rehabilitation task if the task has ALREADY BEEN COMPLETED for that particular record format.

#### Six Rehabilitation Tasks:

- (A) physical arrangement of the records in some sort of logical order
- (B) packaging of records in archival files or sleeves
- (C) appropriate (i.e., consistent) labeling of all file folders
- (D) packaging of files in archival boxes or other archival primary containers
- (E) creation of a finding aid
- (F) making of a duplicate copy

(For example: If all of the black-and-white photographs have been arranged in a logical order, packaged in archival files, and a duplicate copy of each photograph has been made, but none of the other tasks has been completed, you would write A B F in the Condition column).

Record Format	Presence/Absence	Extent	Condition <sup>1</sup>

# Appendix 14

## Rehabilitation Cost Estimates for All Corps of Engineers Districts

---

Following the collection of data from the field, costs for rehabilitation of artifact and record collections were estimated. In general, costs for rehabilitation of collections are based on the level of rehabilitation assigned to each material class or record format and the volume of each collection. As discussed in Chapter 2, material classes were ranked from most represented to least represented within a collection. Record formats (i.e., paper, electronic, photographic, audiovisual, and oversize materials) were measured for each format. Each material class and record format was rated using a rehabilitation level based on compliance with 36 CFR Part 79 and ER 1130-2-540 and its accompanying pamphlet. Rehabilitation level for artifacts was based on the completion of the following six basic tasks.

1. Cleaning of artifacts.
2. Sorting into material classes.
3. Directly labeling artifacts (when applicable).
4. Bagging of materials in appropriate archival container and labeling of each container.
5. Inserting acid-free labels in each secondary container.
6. Boxing and labeling the materials in archival primary containers.

Rehabilitation level for records was based on the completion of the following six basic tasks.

1. Physical arrangement of the materials in a logical order.
2. Packaging of materials in archival files.
3. Appropriate (i.e., consistent) labeling of all file folders.
4. Packaging of files in archival boxes or primary containers.
5. Creation of a finding aid for the collections.
6. Production of a duplicate, security copy of all records.

All rehabilitation levels were recorded to reflect the tasks that remained to be completed for each collection. Thus, the lower the level of rehabilitation, the better condition of the collection. Site numbers were also collected when available and when feasible

### Artifacts

Rehabilitation levels for artifacts identified during site visits were given a factor (in hours) that was based on 20 hours for a box that requires complete rehabilitation (level 6). Each level of rehabilitation, then, was assumed to take one-sixth of 20 hours (See Table 130).

The figure of 20 hours, which was based on rehabilitation work performed by this office during the past two years, includes the time for rebagging of artifacts, labeling artifacts, reboxing artifacts, sorting, cleaning, and recataloging. The difference between the types of rehabilitation tasks for the artifacts is not as important in determining what future costs will be as the type of laboratory processing and collection organization before the rehabilitation starts. For example, a collection that has minimal or conflicting catalog information and multiple, nested paper bags or stapled bags will

take longer to rehabilitate, regardless of what types of material classes comprise the collection, than a collection with large, zip-lock secondary containers.

**Table 130.**  
**Labor Factors Per Rehabilitation Level**

Rehabilitation Level	Factor (in Hours)
0	0.0
1	3.3
2	6.6
3	9.9
4	13.2
5	16.5
6	20.0

When all material classes within a collection require similar rehabilitation, multiplying the rehabilitation factor (in hours) by the volume of the collection (in cubic feet) by the cost of labor and then adding expendable (supplies) costs will produce the required estimated budget. The following example in Table 131 illustrates this scenario.

**Table 131.**  
**Example of Formula for Estimating Total Cost of Rehabilitation**

Rank Order of Material Class	Rehabilitation Level	Rehabilitation Factor (Hours)
1	3	9.9
2	3	9.9
3	3	9.9

**[9.9 x (volume) x (labor cost)] + (Expendables) = Estimated Total Cost to Rehab**

However, when the material classes within a collection require varying levels of rehabilitation, a different formula for calculating costs is required. Simply averaging the rehabilitation factor can lead to underestimating the costs. Therefore, a weighting formula was developed. Because most archaeological collections are comprised of two major material classes, by multiplying the first and second ranked material classes by a factor of 1.5 and 1.25, respectively, and the remaining material classes' rehabilitation factors by 1, and taking the average of the result, the costs for collections with varying rehabilitation needs can be estimated with little fear of a budget shortfall. Table 132 presents one example of this situation.

**Table 132.**  
**Example of Formula for Estimating Total Cost for Rehabilitation Using Weighted Factor**

Rank Order of Material Class	Rehabilitation Level	Rehabilitation Factor (Hours)	Weighted Factor	Weighted Rehabilitation Factor
1	3	9.9	1.50	14.85
2	2	6.6	1.25	8.25
3	4	13.2	1.00	13.20
<b>Average</b>				<b>12.10</b>

**[12.1 x (volume) x (labor cost)] + (Expendables) = Estimated Total Cost for Rehab**

To obtain an estimate of the total costs for labor, a competitive rate for a laboratory technician of \$27.81 (including direct and indirect costs) plus an administrative cost of 8% of the total were used in the formula. This labor rate does not include costs for personal travel or transfer of collections. Costs such as these must be added once a strategy for rehabilitation is chosen.

Costs for expendable supplies (e.g., archival boxes, bags, acid-free paper, and pens) are added based on rehabilitation level, so that a collection needing the most rehabilitation work (level 6) would also incur the most supply cost. A sliding scale (Table 133) was used with \$50 as the highest cost for supplies for a one-cubic-foot box.

**Table 133.**  
**Supply Costs per Rehabilitation Level**

Rehabilitation Level	Supply Cost/Box
0	\$0.00
1	\$8.10
2	\$16.40
3	\$24.70
4	\$33.40
5	\$41.70
6	\$50.00

The rehabilitation level for each collection was averaged, and the supply cost based on the above scale was used and multiplied by the total number of boxes in the collection.

No costs were added for permanent curation supplies like shelving or curation storage fees. Estimated costs for collections potentially requiring substantial conservation work cannot be accurately determined at this time. Costs for conservation will need to be estimated through a needs assessment by a qualified conservator. Once the following formula was applied to each artifact box/collection, all costs were summed to obtain a total cost for the project. An example of calculating costs for artifact rehabilitation is presented below for reference.

$$\begin{aligned}
 &[(\text{Avg. Weighted Rehab Factor of Collection} \times \text{Collection Volume} \times \$27.81 \text{ Labor Cost}) + \\
 &(\text{Expendables: Avg. Rehab Level of Collection} \times \$8.30^a)] + [(\text{Avg. Weighted Rehab Factor of Collection} \\
 &\times \text{Collection Volume} \times \$27.81 \text{ Labor Cost}) + (\text{Expendables}) \times 8\% \quad = \\
 &\quad \text{Estimated Total Cost for Rehab}
 \end{aligned}$$

<sup>a</sup> \$8.30 is approximate supply cost for each rehabilitation level according to Table 133.

District A has an artifact collection from project Y in a repository that consists of the following artifact material classes in varying amounts and requiring varying rehabilitation levels.

*Lithics at a rank of 1, rehab level of 1, rehab factor of 3.3, and weighted rehab factor of 4.95*

*Metal at a rank of 2, rehab level of 1, rehab factor of 3.3, and weighted rehab factor of 4.12*

*Ceramics at a rank of 3, rehab level of 1, rehab factor of 3.3, and weighted rehab factor of 3.3*

*Fauna at a rank of 4, rehab level of 2, rehab factor of 6.6, and weighted rehab factor of 6.6*

*Shell at a rank of 5, rehab level of 2, rehab factor of 6.6, and weighted rehab factor of 6.6*

## APPENDIX 14

Total extent of the collection is 10 cubic feet, with an average rehab level of 1.4, and an average weighted rehab factor of 5.11. Rehabilitation level is variable. Following the above outlined methods, costs would be calculated then for the collection.

$$\begin{aligned} & [(5.11 \times 10) \times \$27.81 + (1.4 \times 8.30)] + [(5.11 \times 10) \times \$27.81 + 1.4 \times 8.30] \times .08 = \$1,547.32 \\ & (\$1,421.09) + \$11.62 + [(\$1,421.09 + \$11.62)(.08)] = \$1,547.32 \\ & (\$1,432.71) + (\$114.61) = \$1,547.32 \end{aligned}$$

## Records

Collections of archaeological artifacts and accompanying records, while similar in many ways, are different enough that both the method of capturing data and that for calculating rehabilitation costs were significantly different. While the actual volume of each material class of artifacts was not recorded, the actual extent of each record format in each collection was measured and recorded using standardized forms developed specifically for this project. Both labor and supply costs for records rehabilitation vary widely depending upon the rehabilitation level and the record format. For instance, level one rehabilitation of one linear foot of paper documentation is significantly less than level one rehabilitation of one linear foot of oversize materials, even if only labor were considered. Tables 134 and 135 illustrate the wide variance in labor costs. Therefore, labor estimates for records were based on hours of labor needed to rehabilitate one linear foot of each record format at each level. To obtain an estimate of the total costs for labor, a competitive rate for an archivist of \$26 (including direct and indirect costs) plus an administrative cost of 8% of the total labor were used to calculate the totals in Table 135.

**Table 134.**  
**Labor Hours by Rehabilitation Level Required to Rehabilitate**  
**One Linear Foot of Records**

Rehabilitation Level	Paper	Photographs	Electronic	Audiovisual	Oversize
1	8	16	12	8	24
2	16	24	16	12	32
3	24	32	20	16	48
4	32	40	24	20	56
5	40	48	28	24	72
6	48	56	32	28	80

**Table 135.**  
**Labor Costs by Rehabilitation Level for One Linear Foot of Records**

Rehabilitation Level	Paper	Photographs	Electronic	Audiovisual	Oversize
1	\$225	\$449	\$337	\$225	\$674
2	\$449	\$674	\$449	\$337	\$899
3	\$674	\$899	\$562	\$449	\$1,348
4	\$899	\$1,123	\$674	\$562	\$1,572
5	\$1,123	\$1,348	\$786	\$674	\$2,022
6	\$1,348	\$1,572	\$899	\$786	\$2,246

Cost variance in records rehabilitation is also dependent upon the cost of expendables. As with labor costs, supply costs vary significantly depending upon record format and rehabilitation level. The cost of duplication alone ensures that the supply costs will double, and then consideration must be given for the costs of additional acid-free paper and duplication costs. Table 136 presents the supply costs for rehabilitating each record format at each level. Again, this was calculated using an extent of one linear foot.

**Table 136.**  
**Cost of Expendable Supplies by Rehabilitation Level for One Linear Foot of Records**

Rehabilitation Level	Paper	Photographs	Electronic	Audiovisual	Oversize
1	\$149	\$1,467	\$101	\$91	\$484
2	\$161	\$1,479	\$113	\$103	\$496
3	\$171	\$1,617	\$119	\$114	\$529
4	\$200	\$1,686	\$214	\$146	\$1,033
5	\$200	\$1,686	\$214	\$146	\$1,033
6	\$210	\$1,696	\$215	\$156	\$1,043

No weighting factor was needed to calculate estimated record rehabilitation costs since record extent was measured for each format. When calculating total rehabilitation costs for records the following formula was applied to each record format present in each individual collection. Once this formula was applied to each record format present in a collection, the subtotals were added together for the total rehabilitation cost of that collection. An example is provided below for reference.

$$[(\text{labor cost from Table 135}) + (\text{supply cost from Table 136})] \times \text{extent of record format} = \text{Total cost for record format}$$

District A has a records collection in a repository that consists of the following record formats in varying amounts and requiring varying rehabilitation levels.

*1.2 linear feet of paper records at level 2*

*0.08 linear feet of photographic records at level 6*

*0.5 linear feet of electronic records at level 1*

*0.16 linear feet of oversize records at level 4*

*Total extent of collection is 1.94 linear feet; rehabilitation level is variable.*

Following the above outlined methods, costs would be calculated then for each format.

Paper:	[\$449 + \$161] x 1.2	=	\$732
Photo:	[\$1,572 + \$1,696] x 0.08	=	\$261
Electronic:	[\$337 + \$101] x 0.5	=	\$219
Oversize:	[\$1,572 + \$1,033] x 0.16	=	\$417

Therefore, the total cost for rehabilitating this collection of records would be the total of the format subtotals, or in this case \$1,629.

## Estimated Rehabilitation Costs

The following tables present estimated rehabilitation costs, by project, for artifact and record collections for USCOE. Data is presented first by Division and then by District. A summary of the tables is presented here to aid in locating specific Districts or Divisions.

CELRD Division	Table 137 (Page 336)	CEPOD Division	Table 145 (Page 347)
CELRD Districts	Table 138 (Page 336)	CEPOD Districts	Table 146 (Page 347)
CEMVS Division	Table 139 (Page 339)	CESAD Division	Table 147 (Page 348)
CEMVS Districts	Table 140 (Page 339)	CESAD Districts	Table 148 (Page 348)
